REVISION HISTORY

REV	PARA	DESCRIPTION OF CHANGE
-	-	Initial Release, No Change (-)
A	Gen	<p>Throughout document, links to Sections, Tables, and Figures have been updated and appear as a change with revision bar even though value has not changed.</p> <p>Throughout document, document titles have been updated to match released title.</p> <p>Throughout document, model designations have been updated.</p>
	1.0	<p>Added new paragraph on model designations.</p> <p>Revised description of data concentration network.</p> <p>Added reapplication date for FAA Type Certification (TC)</p>
	2.1	<p>Removed GVII-GER-1037.</p> <p>Added GAC-CR-02959, GVII-GER-0821, GVII-GER-0822, GVII-GER-1084, GVII-GER-1501, GVII-GER-1070, GVII-GER-1845, GVII-GER-6947, GVII-GER-8158, and GVII-GER-17987.</p> <p>Removed GVII-GER-1075, GVII-GER-1086, GVII-GER-1088 and GVII-GER-1164</p>
	2.2	<p>Added GAC-CR-02359, GAC-CR-04026, GAC-CR-04716, GAC-CR-04717, GAC-CR-05332, GAC-CR-05383, GAC-CR-05386, TAC-CR-05677, GAC-CR-05678, GAC-CR-05679, GAC-CR-05809, GAC-CR-05810, GAC-CR-05846, GAC-CR-05919, GVII-GER-1912, GVII-GER-2322 and GVII-GER-2292.</p> <p>Removed GAC-CR-03959 (relocated to Sec. 2.1)</p>
	2.3	<p>Removed all Wiring Diagrams (was Section 2.3.1).</p> <p>Section 2.3.1: Replaced all Wire Harness Assembly Looms.</p> <p>Section 2.3.2: Replaced all Wire Harness Installations.</p> <p>Section 2.3.3: Replaced all Panel Assembly Looms.</p> <p>Section 2.3.4: Replaced all Decal Installations.</p> <p>Section 2.3.5: Replaced all Structural Provisions Installations.</p> <p>Section 2.3.6: Replaced all Fiber Optic Drawings.</p> <p>Section 2.3.7: Added new section with Ground Strap Installation drawings.</p> <p>Removed all hazard zone documents (was Section 2.3.7).</p>
	2.5	<p>Removed GAC-CR-18478, GAMPS2605, MIL-W-25038 E, AV-GVII-TS-529.</p> <p>Added 60P2516100Z, 72P3200000-001, EIA 557, GAC-CR-01906, GAC-CR-04321, GAC-CR-04601, GAC-CR-04964, GAC-CR-05663, GAC-WM-229, GAT11F, GOP0004, MIL-DTL-5541, MIL-DTL-38999, MS90387-1, SAE ARP 4754A, SAE ARP4761, SAE-AS39029, SAE-AS5015.</p>
	2.6	Added GVII-GER-2023 and GVII-GER-2366.
	2.7	<p>Updated TAD Issues List date to 02/18/2015.</p> <p>Changed GVII IP G-TBD01 to GVII IP G-05.</p> <p>Changed GVII IP G-TBD02 to GVII IP G-07 and updated title.</p> <p>Changed GVII IP S-TBD01 to GVII IP S-01.</p> <p>Added AC 25-26, AC 25-27A, AC 25.869-1, AC 25.899-1, AC 25.1353-1A, AC 25.1360-1, AC 25.1362-1, AC 25.1365-1, and GVII IP S-08.</p>

	2.8	Removed EU-OPS1. Added GVII CRI E-13. Changed GVI CRI F-03 to GVII CRI F-08 and updated title.
	2.9	Added GVII-GER-1623, GVII-GER-1625, and GVII-GER-1637. Changed title of GVII-GER-1684.
	2.10	Changed EU-OPS to EU. Added acronyms BEER, CNTOR, COM, CTRL, DEL, ESC, EVAC, EZAP, EZIP, GSM, HAS, ICA, IOGM, IRM, MAN, MLG, NLG, PTFE, PROX, QPL, RLY, SAT, SEC, SRD, STBY, SWPM, TAT, and TRD.
	3.1	Removed final paragraph: "System wires in the aircraft are printed with the appropriate circuit function identifier using laser marking per SAE AS50881, Wiring Aerospace Vehicle. System wires on the aircraft are segregated by "separation category" per GVII-GER-0404, GVII EMC Guidelines for Wiring Separation, Shielding, and Grounding. GVII-GER-0404 takes in to account MIL-STD-464C, MIL-STD-461F and MIL-B-5087B for guidance and installation requirements regarding EMI concerns. Wires of same signal types are grouped together into assemblies for installation on the aircraft. For aircraft grounds and connectors MIL-DTL-83413 is used for guidance along with the GVII-GER-0404 for classification into separate categories."
	3.2	First paragraph, added text as shown. Second paragraph, removed "Components (wire, connectors, splices, etc) are qualified under 14 CFR 25.603 and 14 CFR 25.1703 for use on the aircraft. This qualification includes a review of the component specification to ensure it is qualified to the correct military standards or industry test standards such as ECA EIA 364-E. In some cases, additional electromagnetic interference (EMI) protection is required in the form of both metallic overbraid and EMI-rated backshells." Changed 14 CFR 25.603 to 14 CFR 25.1703 in "Electrical Panel Assemblies" section. Removed paragraph: "For the GVII family, Gulfstream will manufacture modular harness assemblies similar to GVI. A modular harness assembly is a collection of individual harness assemblies, grouped together into one unit to allow faster installation in the aircraft. The modular assembly is held together using specially designed cushioned clamps, AS21919 clamps or equivalent. When the modular assembly is placed in the aircraft, the clamps will be used secure wire harness bundles to the aircraft. Clamps supporting the modular harness assembly will mate with pre-installed brackets that are attached to the aircraft structure." Removed paragraph: "Per GVII-GER-6588 Electrical Wiring Interconnect System Design Criteria requirements, every sixth wire harness support position will be an AS21919 type, or equivalent, cushioned clamp device. Between the cushioned clamp positions, mounting plates or brackets with nylon supports that accept MS3367 plastic tie-down straps will be used to secure wire harness assemblies into the aircraft. Exceptions to this installation practice will be the main aircraft power feeder cables (entire installation) and fly-by-wire harness bundles (portions of fly-by-wire bundles that are routed though frame penetrations). In these cases, wire harnesses will be secured using AS21919 type cushioned clamps for the entire harness assembly length."

Gulfstream

GVII Electrical Wiring Interconnect System Certification Plan

		<p>Removed paragraph: "All mechanical support brackets are designed to support load requirements of the electrical wire harness assemblies. Design requirements are as defined in GVII-GER-0183, P42 Stress Criteria document. Brackets will be reviewed and approved by both the electrical systems AR and a structural systems AR."</p> <p>Removed paragraph: "Using CATIA V5, wire harness assembly models are grouped together into installation models. Installation models will provide locations and mechanical components necessary to facilitate installation of wire harness assemblies into the aircraft. Models show spatial separation details between wire harness assemblies and other systems components, per GVI-GER-1757, Systems Installation Separation Requirements for GVI Aircraft and GVII-GER-6588, Electrical Wiring Interconnect System Design Criteria Document. Installations that require a deviation from the requirement listed in the design documents will be listed in GVII-GER-1179, GVII EWIS (Electrical Wiring Interconnect Systems) Deviations Report."</p> <p>4.0 Changed certification basis to be through Amendment 25-137. Table 1: Changed GVII IP S-TBD01 to GVII IP S-01. Added 25.1301(a)(4). Changed EU-OPS 1 to Commission Regulation (EU) No 965/2012 of 5 October 2012, Air Operations. Added bullet for non-commercial air operations.</p> <p>5.1 Removed paragraph: "All electrical aspects of the APU are qualified to TSO C-77b, including the wiring harnesses up to the mating connector with the aircraft and are therefore excluded from this certification plan." Removed paragraph: "All electrical aspects of the engine installation that are included as part of the 14 CFR part 33 type design, including the wiring harnesses up to the mating connectors with the aircraft, are qualified under 14 CFR part 33 design approvals. Gulfstream will review the previously approved data and demonstrate that the approved data is applicable to the installation." Added bullet for GVII-GER-1637, HIRF and Indirect Effects of Lightning. Added discussion of direct effects of lightning. Added discussion of GVII CRI E-13. Added reference to APU and engine EWIS section. Added Table 2 with method statements removed from Appendix A.</p> <p>5.2 Table 3: Changed GVII IP G-TBD01 to GVII IP G-05. Table 3: Changed GVII IP G-TBD02 to GVII IP G-07 and updated title. Table 3: Changed GVII IP S-TBD01 to GVII IP S-01. Table 3: Added GVII IP S-08 and GVII CRI A-08. Table 3: Changed GVI CRI F-03 to GVII CRI F-08 and updated title. Updated TAD Issues List to 02/18/2015. Table 4: Changed GVII IP S-TBD01 to GVII IP S-01 and removed redundant text.</p> <p>5.3 Changed GVII IP G-TBD02 to GVII IP G-07 and updated title. Added reference to GVII-GER-1084. Table 5: Replaced aircraft environment with reference to GVII-GER-1084. Deleted "Hazard Zone" column. Changed GVII IP G-TBD02 to GVII IP G-07. Added reference to testing as appropriate. Table 5: Deleted "GVII-2 Hazard Zones" Table. Table 6: Added discussion and "Interconnect Qualification Matrix" table.</p> <p>5.5 Revised text for hazard assessment.</p> <p>5.6 Revised text and removed table of system safety documents.</p>
--	--	---

Gulfstream

GVII Electrical Wiring Interconnect System Certification Plan

	5.7	Revised text and replaced contents of Table 6, "Test Articles."
	5.9	Added Section.
	5.10	Added Section.
	6.0	Added reference to GOP0004. Changed "and GVII-GER-1164 Aircraft EWIS Model Validation Inspection Requirements" to "and the inspection chapters of GVII-GER-2023." Added paragraph on compliance inspection plan. Added subsections with additional discussion on conformity.
	8.1	Moved Steven Firra to first row and changed "Alternate" to "Primary", added EWIS Flammability and Safety. Changed Tom Fancy from "Alternate" to Primary". Removed Lonnie Ackerman, Charles Michaels, Catherine Downen, Lorene Anderson. Added Craig Buckthal, Bradley Huennekens, Nick Chan, Jon Cox, Joel Gress, Steven Douglas, Kevin Jones, Michael Reid, Lawrence Landall, Oscar Garcia, Donald Stuber (retired), Alvin Grams, Robert Kindle, Martin Marinov, Scott Ose, Dana Rice, Rowland Seckinger, John Seibert, Kevin Suhr, George Waters, Jeffery Butler, Owen L. Fields, Nhan Andy Hoang, Roy De Bruycker, Victor DeLaTorre, Jong-un Hong, Marc McCune, Bruce Stewart, Timothy Kessler, Chuck Hunter, Wayne K. Settles, Phillip Humphries, Albert Blasini, Betty Ryan, Jason Willis, Stuart Peterseim, Dave Boney, Christopher Custis, Luis Enrique Trujillo Lopez, Donald Blake, Deborah Beasley, Alejandro Vea, Billy Guest, David L. Pendergrass (cancelled), Earl Seabrooks, Bennie Regehr, Margie Pitts, Jeffrey Reihe, Caesar Miles, Billy Hutchinson, Michael Maley, John L. Flick (cancelled), James Dunn (cancelled), Prakash Nayee, Timothy Corcoran (cancelled), Robert (Bob) Guichard, Austin Broome, C. Jeffrey Williams, Daniel A. Alvey, James DiStefano, Scott Pitts, Kenneth Evans, James Devany, Maria Palmer, David Van Alstine, William Welch, Phil Burton, Nicholas Altomare, James Glotzbach, Tommy Robinson, Tim Hayes, Andy Wallington, Keith Candline, Tom Strohmayer, and Glen Williams (retired).
	8.2	Added explanation related to non-delegation of 25.1709 and indication that documents will be supplied to the FAA for compliance findings
	9.0	Added discussion on EWIS ICA and Standard Wiring Practices Manual.
	App A	Entire Appendix replaced for updates.
	App B	Entire Appendix replaced for updates.
	App C	Part I(b)(c)(d): Revised aircraft model designations. Part II(a): Changed Glen Williams to Tommy Robinson. Part II(c): Changed Charles Michaels to Stephen Shaw. Part II(d): Added inspection ARs for part conformity. Removed name for TIA flight testing, added statement that it is not applicable to EWIS.

Gulfstream

GVII Electrical Wiring Interconnect System Certification Plan

	<p>Part II(e): Removed Naveed Aziz, Brad Thompson, Ken Obenshain, Robert Hastings, Richard Juergens, Robert Hodges, Thomas Horne, Albert Moros, Ron Newton, William Osborne, and Paul Donovan. Added Craig Buckthal, Bradley Huennekens, Nick Chan, Jon Cox, Joel Gress, Mitchell Krah, Walter Richter, Ronald Carstens, Steven Firra, Steven Douglas, Lawrence Robbins, Stephen Kilburn, Bob Caruthers, Kevin Jones, Michael Reid, Lawrence Landall, Oscar Garcia, and Donald Stuber (retired). Added statement that TIA/TIR not applicable to certification of EWIS.</p> <p>Part III(b): Changed zip code from 31402 to 31407.</p> <p>Part III(c): Clarified that draft of maintenance manual must be released.</p> <p>Part III(d): Updated model designations.</p> <p>Part VI(a): Added clarifying text for issuance of 8120-10. Added Tom Strohmayer and Glen Williams (retired).</p> <p>Part VI(d): Changed Glen Williams to Robert Glasscock.</p> <p>Part VII(a): Replaced general statement that wire harness assembly looms would be conformed with a list of specific assemblies to be conformed.</p> <p>Part VII(b): Replaced list of installation conformities.</p> <p>Part VII(e): Replaced Glen Williams and Sam Smith with James Glotzbach and Nicholas Altomare.</p> <p>Part VII(f): Removed address and flight test dates, not applicable to EWIS.</p> <p>Part VII(g): Removed Naveed Aziz, Brad Thompson, Robert Hastings, Richard Juergens, Robert Hodges. Added Craig Buckthal, Bradley Huennekens, Nick Chan, Jon Cox, Joel Gress, Mitchell Krah, Walter Richter, Ronald Carstens, Steven Firra, Steven Douglas, Lawrence Robbins, Stephen Kilburn, Bob Caruthers, Kevin Jones, Michael Reid, Lawrence Landall, Oscar Garcia, and Donald Stuber (retired).</p> <p>Part VIII(a): Replaced reference to GVII-GER-0073 with location.</p>
App C Cont.	
Add 1	<p><u>Addendum 1</u></p> <p>2.1 Added GVII-GER-0848, GVII-GER-0849, and GVII-GER-2447.</p> <p>2.3 Removed all Wiring Diagrams (was Section 2.3.1).</p> <p> Section 2.3.1: Replaced all Wire Harness Assembly Looms.</p> <p> Section 2.3.2: Replaced all Wire Harness Installations.</p> <p> Section 2.3.3: Replaced all Panel Assembly Looms.</p> <p> Section 2.3.4: Replaced all Decal Installations.</p> <p> Section 2.3.5: Replaced all Structural Provisions Installations.</p> <p> Section 2.3.6: Replaced all Fiber Optic Drawings.</p> <p> Section 2.3.7: Added new section with Ground Strap Installation drawings.</p> <p>2.5 Added GAC-CR-06066, FQMS In-Tank Wire Harness Source Control Data</p> <p>5.9 Added section heading to match body.</p> <p>5.10 Added section heading to match body.</p> <p>6.1-6.3 Added sub-sections.</p> <p>9.0 Added section heading to match body.</p>
Add 2	<p><u>Addendum 2</u></p> <p>2.1 Added GVII-GER-0883, GVII-GER-0884, and GVII-GER-2448.</p>

Gulfstream

GVII Electrical Wiring Interconnect System Certification Plan

	2.3	Removed all Wiring Diagrams (was Section 2.3.1). Section 2.3.1: Replaced all Wire Harness Assembly Looms. Section 2.3.2: Replaced all Wire Harness Installations. Section 2.3.3: Replaced all Panel Assembly Looms. Section 2.3.4: Replaced all Decal Installations. Section 2.3.5: Replaced all Structural Provisions Installations. Section 2.3.6: Replaced all Fiber Optic Drawings. Section 2.3.7: Added new section with Ground Strap Installation drawings. Added GAC-CR-06067, FQMS In-Tank Wire Harness Source Control Data
	2.3 Cont.	
	2.5	
	5.9	Added section heading to match body.
	5.10	Added section heading to match body.
	6.1-6.3	Added subsections.
	9.0	Added section heading to match body.
B	2.1	Changed Revision Approval page – in footer for this page revision has been changed to “Noted” and updated the Table of Content pages numbers as required Footer on every Page changed the Rev to “B” Added documents GVII-GER-0819 MLG CLEARANCES DEVIATION; Moved document and corrected name of GVII-GER-2023, Standard Wiring Processes Manual for Gulfstream Aircraft from Section 2.6 to Section 2.1; Moved document GVII-GER-2366, GVII Electrical Wiring Interconnect System ICA Requirements from Section 2.6 to Section 2.1; Removed document GVII-GER-1178 GVII EWIS Collector Added document GER-0662 EWIS COMPONENTS REVIEW Added document GVII-GER-3121, EWIS Component Qualification Requirements Updated document title on document 729124.002 to GVII G500 Stress Analysis of Electrical Brackets Added the following document to section 2.2 GAC-CR-02332 GVII-G500 NLG Assembly QTP; GAC-CR-06096 Qualification Test Plan - GLENAIR Masterwrap Side Entry EMI Cable Shielding Sleeves; GAC-CR-06141 Click Bond Delta Testing Plan & Procedure; GAC-CR-06143 QTP EWIS Harness Coverings Flammability; GAC-CR-06214 Click Bond CB359 Testing Plan & Procedure; GAC-CR-06611 HIREL Engineering Test Plan 10555; GVII-GER-1164, GVII EWIS Inspection Plan

GVII Electrical Wiring Interconnect System Certification Plan

		Added the following document to section 2.5 72P9700000-001 ELECTRICAL WIRING INTERCONNECT SYSTEM SLCCD; 72P2329023Z Source Control Drawing Gulfstream GVII-G500 Harness Assembly – GEN 5, Ethernet Cable; 72P5797711Z SOURCE CONTROL DOCUMENT GULFSTREAM GVII-2 HARNESS ASSEMBLY; 72P5797712Z SOURCE CONTROL DOCUMENT GULFSTREAM GVII-2 HARNESS ASSEMBLY; 72P5797748Z Source Control Drawing Gulfstream GVII-2 Harness Assembly - AFT SPAR, FC POWER, AILERON MCE, RH; GAC-CR-02024 Acceptance Test Procedure, Nacelle System, PW81X; GAC-CR-05583 Auxiliary Power Unit Wire Harness Outline Drawing; GAC-CR-05744 Wire to Wire Abrasion Test Analysis; GAC-CR-05814 Aft Spar Harness Shroud Source Control Drawing; GAC-CR-05854 System Grommet Qualification by Analysis; GAC-CR-05880 Icore Backshell 90 Degree Outline Drawing; GAC-CR-05883 GVII Supplier Outline Drawing - Fire Resistant Cable; 72P2315028Z GVII-2 SATCOM ANTENNA COAXIAL CABLE ASSEMBLY; 72P2319027Z GVII-2 High Speed Data Coaxial Cable Assembly; 72P3161001Z Gulfstream GVII-2 150 OHM and 100 OHM Video Cable Harness Assemblies; 72P4420260Z GVII-2 SAT TV Antenna Coaxial Cable Assembly; GAC-CR-06130 GVII IOGM Backshell EWIS Summary Compliance Report; GAC-CR-06420 HIREL Connector Qualification By Similarity/Analysis Report; Added the following document to section 2.5: GAC-CR-03959 GVII EWIS INSPECTION COMPLIANCE REPORT; GAA100CP PROCESS FOR POTTING AND SEALING OF EWIS COMPONENTS; 1159AV33022 CIRCUIT BREAKER (MOD) INSTL OF RED CAPS; GAMPS2608 FABRICATION AND INSTALLATION OF FIBER OPTIC CABLE ASSEMBLIES; 72P1197101Z DECALCOMANIA – COLOR IDENTIFIER FOR CONNECTORS SOURCE CONTROL DOCUMENT; 72P3200003 Nose Landing Gear CLCCD; 72P3447156Z GVII-2 TCAS Antenna Coaxial Cable Assemblies; 72P5797013Z Source Control Document GVII Wing System Grommets; 72P9701711Z Source Control Document GVII Empennage System Grommets; 72P5797731Z SOURCE CONTROL DOCUMENT GULFSTREAM GVII-2 HARNESS ASSEMBLY - AFT SPAR, FC POWER, SPOILER EBHA, LH; 72P5797732Z SOURCE CONTROL DOCUMENT GULFSTREAM GVII-2 HARNESS ASSEMBLY - AFT SPAR, FC POWER, SPOILER EBHA, RH; 72P9742614Z GVII-2 Emergency Location Beacon Antenna Coaxial Cable Assembly; 72T2519105C025 SUBSTRATE - COMPOSITE PLY; 72T9701500H001 Test Substrate – Honeycomb; 72T9701500S017 TEST SUBSTRATE – CLAD ALUMINUM; 72T9701500S019 TEST SUBSTRATE – PRIMED CLAD ALUMINUM; 72T9701500S023 TEST SUBSTRATE – PRIMED AND TOP COATED ALUMINUM; GAC-CR-05190 Assembly and Installation Specification, Wire Harness, PW81X; GAC-CR-01826 GVII SCD MAU (Modular Avionics Unit); 72P7100001N001 ENGINE CASE AND DRESSING INSTL – LH; 72P7100002N001 ENGINE CASE AND DRESSING INSTL – RH; GAC-CR-06766 PW&C Outline Drawing, Harnesses, Electrical, PW814 and PW815; GAC-CR-02331 – G500 NLG Drawings & ATP; GAC-CR-02334 – G500 MLG Drawings & ATP; GAC-CR-02346 – G500 MLG Sidebrace Actuator Drawings & ATP; Added document RTCA/DO-313 Certification Guidance for Installation of Non-Essential, Non-Required Aircraft Cabin Systems & Equipment Deleted document number GAC-CR-01961 and corrected number to GAC-CR-01906
B	2.5	Removed document as described above under Section 2.1 and added statement about location of operational documents in GVII Aircraft System Certification Plan
	2.7	Added document AC 20-168 Certification Guidance for Installation of Non-Essential, Non-Required Aircraft Cabin Systems & Equipment (CS&E)
	2.8	Added document GVII CRI F-28 Certification of Power Supply Systems for Portable Electronic Devices
	2.9	Added document GVII CRI F-29 WLAN and interfacing (T-)PEDs
	4.0	Added document GVII-GER-2529 GVII Aircraft System Certification Plan Updated Table 1 Changed EASA Certification Basis from CS 25 Amendment 11 to CS 25 amendment 13

Gulfstream

GVII Electrical Wiring Interconnect System Certification Plan

		Identified that system certification plan addresses EWIS components as defined in 14 CFR 25.1701(a)(1) thru (a)(14). Added comma after the word systems in second paragraph Added clarification on where compliance to 14 CFR 25.1713(c) would be demonstrate for internal wiring in electrical and avionics LRUs listed below the paragraph in bullet format Corrected compliance inspection document number from GVII-GER-2322 to GVII-GER-1164 Added that partial compliance to 25.1725 will be demonstrated by Compliance Inspection Added the full definition as to what part of 14CFR 25.1713(c) would be addressed by EWIS certification plan and what part would be addressed by Aircraft System Certification Plan and/or individual system certification plans Table 2: updated to clarified and removed method statement as required Table 2 deleted GAC-CR-03642 in method statement and replaced with GER-0662 Table 3: added row for GVII CRI F-28 Updated FAA Transport Airplane Directorate (TAD) Issues List, date to 03/30/2017 Updated this section to establish the means of compliance to align with the ODA requirements set forth in ODA memo AR-2016-002 which included the following: Added service history For equipment qualifications added standard MIL DTL 38999, SAE AS 50151, European norms, EIA or Military Standards, and GAC Interconnections Qualification Matrix Added the word Note to the paragraph on classification with respect to GVII IP G-07 and changed the title to reflect GVII instead of GVI Added classifications Standard Parts, Industry Qualified, New Component definitions Updated this section to establish the means of compliance to align with the ODA requirements set forth in ODA memo AR-2016-002 which included the following: <ul style="list-style-type: none"> • Table 5: Rolls 1, 2, 3, 4, and 5; deleted current qualification method statement and changed to GVII IP G-07 Analysis by Gulfstream, and testing as required • Removed classifications Military Qualified, Aerospace Commercial, New Component definitions from below Table 5: and moved to Note as described above Removed Table 6, 5.6 Minor grammar corrections and deleted GVII Project Specific Certification Plan (GVII-GER-0073) and added Aircraft System Certification Plan (GVII-GER-2529) 5.7 Updated Table number to Table 10 and changes to the table 5.9.4 Updated document number from GVII-GER-2322 to GVII-GER-1164 5.10 Added document GAC-CR-03959 GVII EWIS Compliance Inspection Report 6.0 Updated paragraph will minor corrections and ODA Administrator Guidance Memorandum AR-2015-002 requirement 6.4 EWIS Installation – removed Fly-by-Wire exemption routed though frame penetrations 6.0 Updated compliance inspection plan (GVII-GER-2322) to (GVII-GER-1164) 6.4 Added section 6.4 7.1 Updated table number in sentence from 7 to 11 8.1 Updated table number in sentence from 8 to 12 8.1 Updated TABLE 12 PROJECT PERSONNEL LIST as required to reflect current personnel that will support this project 9.0 Undated paragraph to described the current maintenance program as defined in GVII-GER-2529 App A Multiple updates to Appendix A to reflect the project as achieved to date. Changes are denoted by blue revision bars in the left hand margin. App B Multiple updates to Appendix B to reflect the project as achieved to date. Changes are denoted by red text and blue revision bars in the left hand margin. APP C Changed Rev to "B" in Part I and in footer
ADDENDUM 1		
	2.2	Add documents to 2.2 GAC-CR-02612 Qualification Test Procedure Touchdown Endurance Test Electrical Harness LH/RH GVII-G600 Main Landing Gear; GAC-CR-02612 Qualification Test Procedure Touchdown Endurance Test Electrical Harness LH/RH GVII-G600 Main Landing Gear (73P3212471Z/73P3212472Z)

		2.3.1	Added the following document to section 2.3.1: 73R9770745L HARNESS ASSEMBLY – COAX SAT TV ANTENNA; 73R9770755L HARNESS ASSEMBLY – COAX HSD ANTENNA; 73R9770761L HARNESS ASSEMBLY - 270VDC PWR, CH1; 73P9770764L HARNESS ASSY - VOR/LOC CABLE NO.1; 73P9770765L HARNESS ASSY - VOR/LOC CABLE NO.2; 73P9770798L HARNESS ASSY - FC MCE TO RUDDER EB MANIFOLD, VERT NO.2; 73R2797662L HARNESS ASSY - FBW RH 270VDC; 73R2797674L HARNESS ASSY - FBW STAB CH 2; 73P9711045L HARNESS ASSY - CONSOLE NO 1, LH OUTBOARD; 73P9711103L HARNESS ASSY - FWD MID TO RACK NO 2 OH, POWER; 73P9712020L HARNESS ASSY - LH LAV CROSSOVER; 73P9712024L HARNESS ASSY - FWD-MID TO RACK HARN NO2, RH; 73P9770767L HARNESS ASSEMBLY - COAX HSD ANTENNA; 73P9770768L HARNESS ASSEMBLY - COAX HSD ANTENNA Revised title of document 73P9732362L to HARNESS ASSY - NO 42, LH, CTR MID
		2.3.2	Added the following document to section 2.3.2: 73P9770750N001-R01 HARNESS INSTL - VERTICAL FIN; 73P2797662N001-R01 HARNESS INSTL - FBW RH 270VDC; 73P2797674N001-R01 HARNESS INSTL - FBW STAB CH 2; 73P9712020N001 HARNESS INSTL - LH LAV CROSSOVER; 73P9761679N001 HARNESS INSTL - QUADRAx, SATCOM Revised title on document 73P9712052N001 to HARNESS INSTL-GLIDE LEER TO RH
		2.3.3	Added document 73P2397951P Harness Assy - Comm Jack, Pilot Sensitive, 73P2597993P HARNESS ASSY - CONTROL, BEER, LH Added the following document to section 2.3.5: 73P5797081N001 BRACKET INSTL - SPAR, WINGBOX SIGNAL, LH, FWD; 73P5797082N001 BRACKET INSTL - SPAR, WINGBOX SIGNAL, RH, FWD; 73P9701400N001-R01 BRACKET INSTL - HARNESS SUPPORT, UPPR, LH, AFT MI; 73P9701401N001 BRACKET INSTL-R01 HARNESS SUPPORT, UPPR, RH, AFT MID; 73P9701700N001-R01 BRACKET INSTL - HARNESS SUPPORT, EMPENNAGE; 73P3212001N001 STRUCTURE INSTL – MAIN LANDING GEAR, LH; 73P3212002N001 STRUCTURE INSTL – MAIN LANDING GEAR, RH; 73P3222000N001 STRUCTURE INSTL – NOSE LANDING GEAR; 73P9701401N001-R01 BRACKET INSTL - HARNESS SUPPORT, UPPR, RH, AFT MID; 73P9701561N001-R01 SUPPORT INSTL - HARNESS, LWR, RH, AFT; 73P9701710N001-R01 SUPPORT INSTL - HARNESS, EMPENNAGE; 73P9701711N001-R01 SUPPORT INSTL - HARNESS, VERTICAL FIN, EMPENNAGE
B		2.3.5	Added the following document to section 2.3.7: 73P2575200N001 EQUIPMENT INSTL - UNDERFLOOR, FWD MID; 73P2575210N001 SUPPORT INSTL – UNDER FLOOR EQUIP, FWD MID; 73P3810300N001 WATER LINE INSTL - FWD MID; 73P3810103N001 DRAIN PORT INSTL, WATER – WTBF; 73P2581101N001 Insulation Instl – Damping Composite, Fwd; 73P3830300N001 LINE INSTL - VAC WASTE SYS, FWD MID; 73P3830301N001 LINE INSTL - VAC WASTE SYS, CTR MID; 73P3830302N001 LINE INSTL - VAC WASTE SYS, AFT MID; 73P4910100N001 AUXILIARY POWER UNIT INSTL; 73P4912100N001 AIR INLET INSTL - APU, UPPER; 73P5310003N001 CANOPY ASSY – LOWER; 73P7120001N001 ENGINE INSTL – LH; 73P7120002N001 ENGINE INSTL – RH; 73P3800101N001 DRAIN PORT INSTL, WATER – FWD MID
		2.3.7	Added the following document to section 2.3.7: 73P4411200N001 EQUIPMENT INSTL - GCMS CONTROLLER, FWD MID; 73P4411120N001 SUPPORT INSTL - GCMS CONTROLLER, FWD RH; 73P4411300N001 EQUIPMENT INSTL - GCMS CONTROLLER, CTR MID; 73P4411100N001 EQUIPMENT INSTL - GCMS CONTROLLER, FWD; 73P2510400N001 SUPPORT INSTL - HUD EQUIPMENT, FWD; 72P2572511N001 SUPPORT INSTL - ELEC, BOILER ROOM, LH Removed document 73P9701551N001 BRACKET INSTL - HARNESS SUPPORT, LWR, RH, AFT as a duplicate entry. Document is in Section 2.3.5 73P2515000N001 RACK INSTL - ELEC EQUIP, SHELL, LH, FWD; 73P2516000N001 RACK INSTL - ELEC EQUIP, SHELL, RH, FWD;

Gulfstream

GVII Electrical Wiring Interconnect System Certification Plan

		Added the following document to section 2.5: 73P9700000-001 ELECTRICAL WIRING INTERCONNECT SYSTEM SLCCD; 73P5797711Z Source Control Document Gulfstream GVII-G600 Harness Assembly - AFT SPAR, FC SIGNAL, LH; 73P5797712Z Source Control Document Gulfstream GVII-G600 Harness Assembly - AFT SPAR, FC SIGNAL, RH; 73P5797747Z SOURCE CONTROL DOCUMENT GULFSTREAM GVII-G600 HARNESS – AFT SPAR, FC POWER, AILERON MCE, LH; 73P5797748Z SOURCE CONTROL DOCUMENT GULFSTREAM GVII-G600 HARNESS – AFT SPAR, FC POWER, AILERON MCE, RH; GAC-CR-02503 GVII-G600 MLG ASSEMBLY QTP; 73P7100001N001 ENGINE CASE AND DRESSING INSTL – LH; 73P7100002N001 ENGINE CASE AND DRESSING INSTL – RH; GAC-CR-02499 – G600 NLG Drawings & ATP; GAC-CR-02502 – G600 MLG Drawings & ATP; GAC-CR-02514 – G600 MLG Sidebrace Actuator Drawings & ATP
	2.5	Updated section
	4.0	Updated section and added Table 9
	5.2	Updated section to include exception for GVII-G600 unique EWIS components documented in GER-0662 Addendum 1
	5.3	
	7.1	Updated Table 10 and changed Table reference from 9 to 10 in first paragraph.
		ADDENDUM 2
B	2.3.1	Added the following document to section 2.3.1: 71P9712024L FWD-MID TO RACK HARN NO2 RH
	2.3.5	Deleted the following documents: 71P2511100N001 SUPPORT INSTL - LOWER INSTRUMENT PANEL, FWD
	2.3.7	Added the following document to section 2.3.7: 71P2400100N001 PANEL INSTL - RELAY, UNDERFLOOR, FWD 71P2581101N001 INSULATION INSTL - DAMPING COMPOSITE, FWD 71P2743000N001 ACTUATION SYSTEM INSTL - HORIZONTAL STABILIZER TRIM 71P5310003N001 CANOPY ASSY - LOWER 71P7897001N001 TRAS ELECTRICAL INSTALL – LH 71P7897002N001 TRAS ELECTRICAL INSTALL – RH Deleted the following documents: 71P2337001N001 CAMERA INSTL – EMPENNAGE, 71P2510410N001 EQUIPMENT INSTL - HUD EQUIPMENT, FWD; 71P2515000N001, RACK INSTL - ELEC EQUIP, SHELL, LH, FWD; 71P2516000N001 RACK INSTL - ELEC EQUIP, SHELL, RH, FWD; 71P2572520N001 EQUIPMENT INSTL - ELEC, BOILER ROOM, LH; 71P3404300N001 ANTENNA INSTL - NAVIGATION, CTR MID; 71P3404410N001 SUPPORT INSTL - NAVIGATION, AFT MID;
	2.5	Added the following documents to section 2.5: 71P9700000-001 ELECTRICAL WIRING INTERCONNECT SYSTEM SLCCD; 71P7100001N001 , ENGINE CASE AND DRESSING INSTL – LH; 71P7100002N001 , ENGINE CASE AND DRESSING INSTL – RH;) GAC-CR- 4403 PW&C Outline Drawing, Harnesses, Electrical, PW812
	4.0	Updated section and added Table 11 SC, ESF/ELOS, and Exemptions and Table reference in first paragraph.
	5.2	Updated section and added Table 12 GVII-G400 APPLICABLE IPS AND/OR CRIS
	5.3	Updated section to include exception for GVII-G400 unique EWIS components documented in GER-0662 Addendum 2
	7.1	Updated Table 11 to Table 13 and Table reference in first paragraph.

1.0 PURPOSE

The Gulfstream model GVII is defined as a new product family comprising of three airplanes having similar design and manufacture. Each airplane has different gross weights, physical dimensions, and range capabilities. The family is referred to as GVII-G400, GVII-G500, and GVII-G600. GVII-G500 will function as the baseline. GVI-G400 and GVI-G600 will be variants of that model. Section 3.0 provides additional description of the GVII-G500.

FAA concurrence was received on October 6, 2014 for model designation changes to the GVII-1, -2 and -3 as shown below. No later than December 15, 2014 all new type design and substantiating data and revisions to previously released data are required to reflect these new aircraft model designations:

Original Designation (Was)	New Designation (Is)
GVII-1	GVII-G400
GVII-2	GVII-G500
GVII-3	GVII-G600

Any remaining references to the original model designations among texts or data that are unchanged or that were released prior to this change are to be regarded as meaning the same as the new model designation.

The purpose of this certification plan is to define and document the requirements, tasks, timeframes, and resources necessary to certify the Electrical Wiring Interconnect System (EWIS), as described herein, of the Gulfstream Model GVII family of aircraft. It also identifies the tests, analysis, and inspections that will be conducted to demonstrate compliance and the associated substantiating data that will be generated. This document is complete to the extent possible at the beginning of the GVII program; however, it will be subject to revision when necessary to address design and or program changes. Changes to this document require review and acceptance by the Gulfstream Organization Designation Authorization (ODA) and the Federal Aviation Administration (FAA).

The following new or novel technologies will be introduced on the GVII-2.

- Active control side-stick
- Data concentration network (new to Gulfstream, not new to aviation industry)
- Touch screen controllers in the cockpit

For each of the above systems the EWIS contains the wires, cables, connectors and backshells required for these systems to communicate.

Application for FAA Type Certification (TC) of all three variants was made on October 28, 2010 and reapplication was made on March 29, 2012. Gulfstream ODA Project Numbers TC-01-2010-0024 (GVII-G500), AT-01-2010-0025 (GVII-G600), and AT-01-2010-0026 (GVII-G400) have been assigned for FAA TC activities. Gulfstream ODA Project Numbers TC-01-2011-0030 (GVII-G500), AT-01-2011-0031 (GVII-G600), and AT-01-2011-0032 (GVII-G400) have been assigned for European Aviation Safety Agency (EASA) TC activities.

The main body of this cert plan covers the GVII-G500 model. Differences between the GVII-G600 and GVII-G500 are discussed in Addendum 1. Differences between the GVII-G400 and GVII-G500 are discussed in Addendum 2.

2.0 APPLICABLE DOCUMENTS

The following subsections identify documents referenced herein. See Appendix A and Appendix B for a list of documents demonstrating compliance.

2.1 Engineering Reports

Document Number	Document Title
GAC-CR-03959	GVII EWIS Inspection Compliance Report
GER-0662	EWIS COMPONENTS REVIEW

3.0 DESCRIPTION

The GVII-G500 airplane will be a transoceanic, large cabin, corporate jet optimized for corporate / executive operations (14 CFR Part 91) and commuter / on-demand (14 CFR Part 135) operations typical of the Gulfstream fleet. The GVII-G500 will have a low, swept wing with winglets, a T-tail, two turbofan engines mounted in nacelles on the aft fuselage, and conventional retractable tricycle landing gear. The GVII-G500 integrates a tailored version of the model GVI Honeywell Primus EPIC® flight deck displays and avionics architecture. GVII-G500 also incorporates a three-axis Fly-By-Wire flight control system similar to GVI. GVII-G500 will also introduce: an active control side-stick, a data concentration network, and touch screen controllers as new or novel technologies.

3.1 General EWIS Overview

The GVII-G500 aircraft contains numerous aircraft systems including hydraulic systems, environmental control systems, landing gear systems, avionics systems, etc. Many of these systems receive control data and feedback monitoring data to the different system line replaceable unit's (LRU's) installed in various parts of the aircraft. Power for aircraft systems is created by integrated drive generators (IDG) on each engine. EWIS carries power to the forward cabin. Power is then distributed by two power distribution boxes (PDB's) located directly beneath the forward left and right equipment racks. The GVII-G500 aircraft will contain an electronically controlled flight control system, with active control side sticks in the cockpit, sending movement commands via the flight control computer (FCC) to electrically activated components of the flight control system mounted on the trailing edge of the wings, rudder, and trailing edges of the horizontal stabilizer.

EWIS is the backbone of the power distribution and control/monitoring system. EWIS provides interconnection between electrically activated and monitored components on the aircraft. Data, power, and control/monitoring data can be passed between components in the system via EWIS.

Aircraft electrical systems requirements are reflected in wiring diagrams. Wiring diagrams are grouped by ATA code as defined by GVII-GER-1000, GVII Engineering Master ATA list. Wiring diagrams represent specific point-to-point wiring interconnects throughout the aircraft including all manufacturing disconnects, connector, and wire part numbers. Wiring diagram data is stored in an electronic data management system. The data management system will contain all data pertaining to the electrical components that are used as part of electrical assemblies.

3.2 EWIS System Description

GVII-G500 EWIS will comply with the definition in 14 CFR 25.1701, AC 25.1701-1 and AC 25-26. All aircraft wiring will be grouped into two types of electrical assemblies - electrical wire harness assemblies and electrical panel assemblies.

Electrical Wire Harness Assemblies

Electrical wire harness assemblies will be manufactured using electrical components specified in loom diagrams. Loom diagrams are created from information provided in wiring diagrams as well as information entered directly to the loom diagram.

Electrical wire harness assemblies shall be designed in a computer-aided three-dimensional interactive application (CATIA) V5 using the electrical workbench function. This function allows export of wire harness data directly from CATIA to the loom. Wire harness bundle diameter and wire harness length are calculated in CATIA using wire harness and loom data. When complete, the harness data will be stored in an electronic data management system.

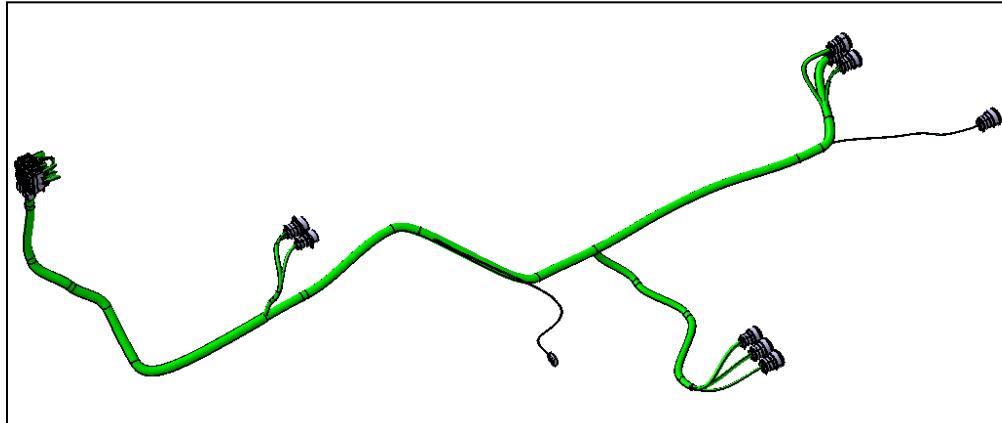

FIGURE 1 ELECTRICAL HARNESS FROM CATIA V5

Electrical Panel Assemblies

Electrical panel assemblies include junction boxes, circuit breaker panel assemblies, control panels, and equipment racks in the forward part of the aircraft and the baggage compartment. Electrical panel assemblies will be manufactured using electrical components specified on the wiring diagrams and mechanical detail parts designed in CATIA V5. All electrical components of electrical panel assemblies (connectors, switches, bus bars, etc) are qualified under 14 CFR 25.1703 for use on the aircraft.

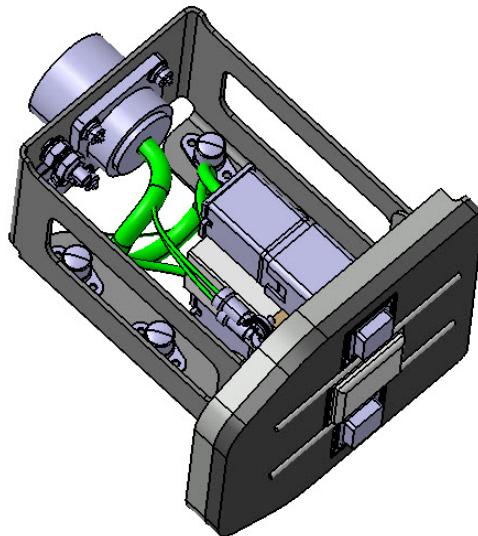

FIGURE 2 ELECTRICAL PANEL FROM CATIA V5

The GVII-G500 aircraft will use fiber optic cables, for data transmission, in several aircraft systems such as Enhanced Vision System and Heads Up Display. Fiber optic cables transmit no electrical energy; therefore no special EMI separation requirements are necessary.

4.0 REGULATORY REQUIREMENTS

The proposed FAA Certification Basis for the GVII-G500 is 14 CFR Part 25, effective February 1, 1965, including Amendments 25-1 through 25-137 with special conditions (SC), equivalent safety

finding (ESF)/equivalent level of safety (ELOS), and Exemptions that are considered to be applicable to EWIS are listed in Table 1 below:

Table 1 SC, ESF/ELOS, and Exemptions

14 CFR Part 25 Paragraph	Description	SC, ESF/ELOS, or Exemption
25.1301(a)(4)	Function and Installation	Equivalent Level of Safety (See GVII IP S-01)
25.1309	Equipment, Systems, and Installations	ELOS (See GVII IP S-01)
25.1711(a)	Component identification: EWIS	Exemption (See Docket No.: FAA-2017-0268)

The proposed European Aviation Safety Agency (EASA) certification basis for the GVII-G500 is CS-25 Amendment 25/13, effective **10 June 2013** and CS AWO effective October 17, 2003 as defined in EASA CRI A-01, EASA Type Certification Basis.

The GVII-G500 is anticipated to be used for corporate / executive operations and will be designed to comply with the following operating rules:

- 14 CFR Part 91, General Operating and Flight Rules
- 14 CFR Part 135, Operating Requirements: Commuter and On-Demand Operations and Rules Governing Persons on Board Such Aircraft
- Commission Regulation (EU) No 965/2012 of 5 October 2012, Air Operations
- Commission Regulation (EU) No 800/2013 of 14 August, 2013, Non-Commercial Air Operations
- CS-AWO, Certification Specification for All Weather Operations (AWO)

The GVII-G500 Type Design will be shown to comply with the design and reliability requirements for up to a 180 minute one-engine-inoperative diversion.

Compliance requirements for this effort are outlined in Section 5.0, and detailed in Appendix A and Appendix B.

5.0 COMPLIANCE

5.1 Limitations

This system certification plan addresses EWIS components as defined in 14 CFR 25.1701(a)(1) thru (a)(14). EWIS includes any wire, wiring device, or combination of these, including termination devices, installed in any area of the airplane for the purpose of transmitting electrical energy, including data and signals, between two or more intended termination points. This certification plan also addresses fiber optic installations which are used to transmit data signals between termination points.

Specific electronic or avionics system certification plans address standards by which their intended function is satisfied. For the following **systems**, the EWIS associated with these systems will be certified per this plan. **In addition, any 14 CFR 25.1713 (c) compliance associated with the electrical or avionics Line Replaceable Units (LRUs) of these systems will be addressed within that system certification plans.** For each of the following systems EWIS provides the physical electrical connections as detailed above.

- Potable Water and Vacuum Waste System - GVII-GER-0097
- Oxygen System - GVII-GER-0098

- Data Concentration Network System - GVII-GER-0127
- Touch Screen Controller System - GVII-GER-0129
- Landing Gear Systems - GVII-GER-10430
- GVII Powerplant Installation - GVII-GER-1120
- Hydraulic Power Systems - GVII-GER-1624
- Primary Flight Control and Horizontal Stabilizer Trim System - GVII-GER-1626
- Auxiliary Power Unit System - GVII-GER-1628
- Fuel System - GVII-GER-1629
- Fire Protection, Powerplant and APU - GVII-GER-1630 (Note that it will be shown in GVII-GER-1630 that the installation associated with fire extinguishing connections and wiring connections is designed to preclude cross connection)
- Environmental Control System - GVII-GER-1649 (Note that it will be shown in GVII-GER-1649 that the ventilation meets the requirements of 14 CFR 25.831.)
- Cabin Pressure Control System - GVII-GER-1651
- Engine Control System Integration - GVII-GER-1661
- Flight Deck and Furnishings – GVII-GER-1662
- Thrust Reverser System Integration - GVII-GER-1668
- Wing Anti-Icing - GVII-GER-1684
- Flap Actuation System - GVII-GER-1743
- Electrical Component Installation - GVII-GER-6572
- Air Data System - GVII-GER-6584
- Electrical Power System - GVII-GER-6586
- Flight Deck Systems - GVII-GER-6808
- Aircraft level High Intensity Radiated Field (HIRF) and Indirect Effects due to Lightning – GVII-GER-1637

The GVII-G500 design does not have any EWIS wiring elements exposed to areas vulnerable to direct effects of lightning (DEL). The exposed structure and systems components that are vulnerable to DEL are discussed with proposed means of compliance to 14 CFR 25.581 in the Aircraft Structures certification plan (GVII-GER-1623) and where applicable, the systems certification plans listed below:

- Potable water and vacuum waste system as described in GVII-GER-0097
- External doors as described in GVII-GER-1625
- Primary flight control and horizontal stabilizer trim system as described in GVII-GER-1626
- Ice Detector as described in GVII-GER-1684
- Flap Actuation System as described in GVII-GER-1743
- Antennae as described in GVII-GER-6572
- Air Data probe as described in GVII-GER-6584
- Ram Air Turbine as described in GVII-GER-6586

The means of compliance GVII CRI E-13 requires a certain level of capability to withstand fire effects either thru characteristics of fire resistance or fire proofness for materials, components, and equipment. The GVII CRI E-13 references CS 25.1713, CS 25.1725, and CS 25.1731 which are related to EWIS. See GVII-GER-1630, GVII Fire Protection, Powerplant and APU, System Certification Plan, for the means of compliance for this CRI.

Gulfstream

GVII Electrical Wiring Interconnect System Certification Plan

The APU and Engine EWIS will fall under the certification requirements of EWIS and are addressed in this certification plan (see Section 5.10.)

Reference Gulfstream document GVII-GER-0417, GVII Regulation Matrix for a listing of all certification plans and the regulations associated with each plan. GVII-GER-0417 also identifies each regulation determined to be not applicable to the GVII-2 program and the associated rationale justifying this determination.

A compliance inspection will be performed on the second production airplane in accordance with GVII-GER-**1164** using guidance of MIL-HDBK-522 and results will be reported in GAC-CR-03959. The second production airplane, P2, was chosen because of the anticipated maturity of the design and the installation process at that stage. Inspection criteria will be determined in accordance with AC 25.1701-1 and will focus on the requirements prescribed by 25.1707. The Compliance Inspection will also show partial compliance to aspects of 25.1703, 25.1705, 25.1719, 25.1721, **25.1725**, and 25.1733, as described in Table 2.

This system certification plan addresses 14 CFR 25.1713(c) Fire protection – EWIS and is limited to EWIS components as defined in 14 CFR 25.1701(a)(1) through (a)(14). Specific electrical equipment or avionics Line Replaceable Units (LRUs) compliance to 14 CFR 25.1713(c) Fire protection – EWIS, for internal wire insulation and materials used to protect wiring will be captured in the Aircraft System Certification Plan and/or individual system certification plans.

Given the significant number of documents used as compliance data for this certification plan and the repetitive nature of the method statements, the method statements usually shown for each row in Appendix A are shown once in Table 2.

TABLE 2 METHOD STATEMENTS FOR APPENDIX A

Regulatory Requirement	Description	Amdt.	MOC	Method Statement
25.301(a)	Loads.	25-23	2	Electrical brackets are secondary structure and will be designed to meet a factor of safety of 1.5 applied to the limit loading.
25.303(all)	Factor of safety.	25-23	2	Electrical brackets are secondary structure and will be designed to meet a factor of safety of 1.5 applied to the limit loading.
25.601	General: Design & Construction	25-0	1	Compliance will be demonstrated by design review of the installations. This design review will substantiate that harness support brackets will not have design features or details that have been shown to be hazardous or unreliable.
			9	Qualification testing will substantiate that harness support brackets will not have design features or details that have been shown to be hazardous or unreliable.
25.603(all)	Materials.	25-46	1	Compliance will be demonstrated by design review of the installations. This design review will substantiate that all materials used on the aircraft harness support brackets have been used on previously certified Gulfstream aircraft.
25.603(a)	Materials.	25-46	9	Qualification testing will substantiate that all materials used on the GVII aircraft harness support brackets have been used on previous certified Gulfstream aircraft.

Gulfstream

GVII Electrical Wiring Interconnect System Certification Plan

Regulatory Requirement	Description	Amdt.	MOC	Method Statement
25.605(all)	Fabrication methods.	25-46	1	Compliance will be demonstrated by design review. The design review will substantiate that EWIS bracket installations will not include components that use any unique or special methods of fabrication. All fabrication methods will use well-established control process specifications. If at a future date a new method is identified and planned for use, a test program will be initiated to substantiate the consistency of the method and will be added to the EWIS plan. Compliance to this requirement will be demonstrated by design review of the installations.
25.609(all)	Protection of structure.	25-0	1	Compliance will be demonstrated by design review. The design review will substantiate that EWIS bracket installations will be suitably protected against deterioration or loss of strength. All materials selected will be corrosion resistant and finished appropriately for the compartment operating environment. Where necessary, drainage provisions will be installed. Compliance to this requirement will be demonstrated by design review of the installations.
25.613(b)(1)(2)(c)(e)(f)	Material strength properties and material design values.	25-112	2	Compliance will be demonstrated by calculation/analysis. The calculation/analysis will substantiate that EWIS system bracket designs will use materials with established allowables.
25.783(a)(3)	Fuselage Doors.	25-114	1	Design review of the EWIS component associated with the main entry door will show that it is designed or, where impracticable, distinctively and permanently marked, to minimize the probability of incorrect assembly and adjustment that could result in a malfunction.
25.863(b)(3)	Flammable fluid fire protection.	25-46	1	The design review will substantiate that fiber optic systems are designed such that any electrical fault, overheating equipment and malfunctioning protective devices will not cause the ignition of fluids and vapors that result from a leakage of a fluid system.
25.869(a)(1)(2)	Fire protection: systems.	25-123	1	The design review will substantiate that fiber optics used in designated fire zones on the GVII aircraft will be fire resistant in accordance with AC 25.869-1A.
25.899(all)	Electrical bonding and protection against static electricity.	25-123	1	Design review of the EWIS component will show that electrical bonding and protection against static electricity minimizes the accumulation of electrostatic charge as defined in this regulation.
25.1203(h)	Fire-detector system.	25-123	1	EWIS for each fire or overheat detector system in a fire zone must meet the requirements of 14 CFR 25.1731.
25.1301(a)(1)(2)(3)	Function and installation.	25-123	1	The design review and inspection will substantiate that all components are being designed and manufactured, per engineering provided system wiring diagrams, to ensure proper system functionality. The harness assemblies and installations will also be reviewed to ensure that designs minimize mechanical strain or possibilities for moisture accumulation. This design review in take into account GVII-GER-6588.
25.1301(a)(4)	Function and installation.	25-123	N/A	See entries for GVII IP S-01 ELOS for 25.1301(a)(2)(3)(4)

Gulfstream

GVII Electrical Wiring Interconnect System Certification Plan

Regulatory Requirement	Description	Amdt.	MOC	Method Statement
25.1353(c)	Electrical equipment and installations.	25-123	1	Compliance will be substantiated by design review which will demonstrate that the EWIS components are installed so that electrical bonding will provide an adequate electrical return path. Design review will be in accordance with guidance provided in AC 25.1353-1A, Electrical Equipment and Installations.
25.1360(a)	Precautions against injury	25-123	1	Design review of the assembly will show that it minimizes risk of electric shock to crew, passengers, and servicing personnel and to maintenance personnel using normal precautions.
25.1431(c)(d)	Electronic equipment.	25-113	1	Design review of the panel assembly will show that radio and electronic equipment, controls, and wiring are installed so that operation of any one unit or system of units will not adversely affect the simultaneous operation of any other electronic equipment. Electronic equipment is designed and installed such that it does not cause essential loads to become inoperative as a result of electrical power supply transients or transients from other causes.
25.1541(all)	General: Markings & Placards	25-0	1	Design review of the decal installation will show that the information, instrument markings, and placards required for the safe operation are provided, that they are displayed in a conspicuous place and are not easily erased, disfigured, or obscured.
25.1701(all)	Definition: Electrical Wiring Interconnection Systems (EWIS)	25-123	N/A	Definition only
25.1703(all)	Function and installation: EWIS	25-123	7	Compliance inspection will be performed using MIL-HDBK-522 to verify all aspects of 25.1703. In doing so, applicable aspects of EWIS Function and Installation will be reviewed for compliance, in accordance with AC 25.1701-1, Certification of Electrical Wiring Interconnection System on Transport Category Airplanes.
25.1703(a)(1)	Function and installation: EWIS	25-123	1	The design review will substantiate that all components that comprise the EWIS under 25.1701 are reviewed per GVII-GER-3121 defining the qualification data use in determining the quality, eligibility and traceability of EWIS parts and materials intended for installation on the GVII aircraft models
25.1703(a)(1)(2) (3)(4)(b)(c)(d)	Function and installation: EWIS	25-123	1	The design review will substantiate that all components that comprise the EWIS under 25.1701 are being designed and manufactured, per engineering provided system wiring diagrams, to ensure proper system functionality. Special attention is paid to proper wire sizing and wire type selection, based on GVII-GER-6588 guidelines and that power feeders will allow for deformation of the fuselage. Also, all EWIS components will be reviewed per GER-0662 for appropriate design and limitations. The harness assemblies and installations will also be reviewed to ensure that designs minimize mechanical strain or possibilities for moisture accumulation. This design review will be conducted in accordance with GVII-GER-6588, GAMPSS2606 and AC 25.1701-1 Certification of Electrical Wiring Interconnection Systems on Transport Category Airplanes.

Gulfstream

GVII Electrical Wiring Interconnect System Certification Plan

Regulatory Requirement	Description	Amdt.	MOC	Method Statement
25.1703(a)(1)(2) (3)(4)(b)(c)(d)	Function and installation: EWIS	25-123	2	The analysis will substantiate that all components that comprise the EWIS under 25.1701 are being designed and manufactured, per engineering provided system wiring diagrams, to ensure proper system functionality. Special attention is paid to proper wire sizing and wire type selection, based on GVII-GER-6588 guidelines and that power feeders will allow for deformation of the fuselage. Also, all EWIS components will be reviewed per GER-0662 for appropriate design and limitations. The harness assemblies and installations will also be reviewed to ensure that designs minimize mechanical strain or possibilities for moisture accumulation. This design review will be conducted in accordance with GVII-GER-6588, GAMPS2606 and AC 25.1701-1 Certification of Electrical Wiring Interconnection Systems on Transport Category Airplanes.
25.1703(a)(1)(2) (3)(4)(b)	Function and installation: EWIS	25-123	9	The qualification testing will substantiate that all EWIS components on the GVII aircraft shall qualified to military specifications (e.g. SAE AS22759 or MIL-DTL-81381) and constructed of materials that are self-extinguishing and meets requirements of 25.831(c). Any EWIS components used in designated fire zones on the GVII aircraft shall also be fire resistant and be qualified to military specifications (e.g. MIL-W-25038E). Compliance to this requirement will be demonstrated by design review of the harness installations and wiring diagrams. Compliance to this requirement will be demonstrated by design review of the harness installations and wiring diagrams. Compliance to 25.831(c) is described in GVII-GER-1649.
25.1703(a)(1)(3) (4)(d)	Function and installation: EWIS	25-123	SI	Compliance will be substantiated by similarity review and where possible thus review will assure prior component testing can be utilized for compliance findings for the listed FARs.
25.1705(all)	Systems and functions: EWIS	25-123	1	Compliance will be substantiated by design review of the drawings which will confirm the EWIS of a system is of an appropriate type and design to allow the proper function of the system. Compliance for 25.1705(b)(8) will be in accordance with AC 25.1365-1. Compliance for 25.1705(b)(10) will be in accordance with AC 25.1362-1. This review will take into account the AC 25.1701-1 and MSG-3 requirements.
25.1705(a)(b)(4) (5)(7)(12)	Systems and functions: EWIS	25-123	2	Compliance will be substantiated by calculation or analysis review of same component demonstrated via in service history to support systems subject to 25.1310, 25.1351 and 25.1431 (c)(d) compliance and / or via analysis of derivative components which have successfully demonstrated supportive environmental testing for said regulations.
25.1705(a)(b)(2) (4)(5)(7)(9)(12)	Systems and functions: EWIS	25-123	9	Compliance will be substantiated by qualification test which will confirm the EWIS of a system is of an appropriate type and design to allow the proper function of the system.
25.1705(a)(b)(4) (7)(12)	Systems and functions: EWIS	25-123	SI	Compliance will be substantiated by similarity review and where possible thus review will assure prior component testing can be utilized for compliance findings for the listed FARs.

Gulfstream

GVII Electrical Wiring Interconnect System Certification Plan

Regulatory Requirement	Description	Amdt.	MOC	Method Statement
25.1705(b)(5)(7)(9)(12)	Systems and functions: EWIS	25-123	1	Compliance will be substantiated by design review of the drawings which will confirm the EWIS of a system is of an appropriate type and design to allow the proper function of the system. Compliance for 25.1705(b)(5) will be in accordance with 25.1316 System lightning Protection, 25.1705(b)(7) will be in accordance with 25.1351, 25.1705(b)(9) will be in accordance with 25.1360 Precautions against injury, and 25.1705(b)(12) will be in accordance with 25.1431(c) and (d) Electronic equipment.
25.1707(all)	System separation: EWIS	25-123	1	Compliance will be substantiated by design review of the drawings which will confirm the design has proper system separation. Proper separation should follow the guideline from GVII-GER-0404 GVII EMC Guidelines For Wiring Separation, Shielding, And Grounding, GVI-GER-1757 Systems Installation Separation Requirements For GVI Aircraft, AC 25.1701-1 Certification of Electrical Wiring Interconnection Systems on Transport Category Airplanes, GAC-CR-03959 , GVII EWIS Compliance Inspection Report , and GVII-GER-6588 Electrical Harness Installations Design Criteria Document. EMI/EMC Source/Victim testing will be conducted in accordance with 14 CFR 25.1353(a) as prescribed in each affected system's corresponding certification plan(s). The EWIS will be verified that any electrical interference likely to be present in the airplane will not result in hazardous effects upon the airplane or its systems.
25.1707(all)	System separation: EWIS	25-123	2	Compliance will be substantiated by analysis of the compliance inspection results which will confirm the design has proper System Separation. Proper separation should follow the guideline from GVII-GER-0404 GVII EMC Guidelines For Wiring Separation, Shielding, And Grounding, GVI-GER-1757 Systems Installation Separation Requirements For GVI Aircraft , AC 25.1701-1 Certification of Electrical Wiring Interconnection Systems on Transport Category Airplanes and GVII-GER-6588 Electrical Harness Installations Design Criteria Document.
25.1707(all)	System separation: EWIS	25-123	7	Compliance inspection will confirm the design has proper System Separation. Proper separation should follow the guideline from GVII-GER-0404 GVII EMC Guidelines For Wiring Separation, Shielding, And Grounding, GVI-GER-1757 Systems Installation Separation Requirements For GVI Aircraft , AC 25.1701-1 Certification of Electrical Wiring Interconnection Systems on Transport Category Airplanes and GVII-GER-6588 Electrical Harness Installations Design Criteria Document.
25.1707(a)(e)(1)(i)(1)(2)(3)	System Separation: EWIS	25-123	9	Compliance will be substantiated by qualification test which will confirm the EWIS of a system is of an appropriate type and design to allow the proper function of the system.
25.1707(a)(f)(1)(2)(i)(1)(2)(3)(k)(l)	System Separation: EWIS	25-123	9	Compliance will be substantiated by qualification test which will confirm the EWIS of a system is of an appropriate type and design to allow the proper function of the system.
25.1709(all)	System safety: EWIS	25-123	3	Compliance will be demonstrated by safety assessment. The safety assessment will substantiate that each EWIS will be designed and installed so that catastrophic failure conditions are extremely improbable, do not result from a single failure and that each hazardous failure condition is extremely remote.

Gulfstream

GVII Electrical Wiring Interconnect System Certification Plan

Regulatory Requirement	Description	Amdt.	MOC	Method Statement
25.1711(all)	Component identification: EWIS	25-123	1	The design review will substantiate that all electrical cables, wires, connectors and terminals have been identified with the proper information, as defined by GVII-GER-6588 Electrical Harness Installations Design Criteria Document which refers to SAE AS50881 Wiring Aerospace Vehicle and SAE-AS5942 Marking of Electrical Insulating Materials. Compliance to the design review requirement will be demonstrated by design review of the harness installations, panel assembly looms, wire harness assembly looms and wiring diagrams.
25.1711(all)	Component identification: EWIS	25-123	7	Compliance inspection will confirm the design has proper component identification as defined by GVII-GER-6588 Electrical Harness Installations Design Criteria Document which refers to SAE AS50881 Wiring Aerospace Vehicle and SAE-AS5942 Marking of Electrical Insulating Materials.
25.1713(all)	Fire protection: EWIS	25-123	1	The design review will substantiate that all EWIS components on the GVII aircraft shall be qualified to military specifications (e.g. SAE AS22759 or MIL-DTL-81381) and constructed of materials that are self-extinguishing and meets requirements of 25.831(c). Any EWIS components used in designated fire zones on the GVII aircraft shall also be fire resistant and be qualified to military specifications (e.g. MIL-W-25038E). Compliance to this requirement will be demonstrated by design review of the harness installations and wiring diagrams. Compliance to 25.831(c) is described in GVII-GER-1649.
25.1715(all)	Electrical bonding and protection against static electricity: EWIS	25-123	1	The design review will substantiate that all electrical harness support brackets have been reviewed for compliance to electrical conductivity requirements and bonding requirements to structure. Electrical bonding of electrical harness components will be in accordance with GVII -GER-6588 Electrical Harness Installations Design Criteria Document, GAMPs 2605 Electrical Bonding Requirements, and GAB17G Bonding – Electrical & Lightning Protection. Each component attached to structure will be bonded to structure through the attachment or by a bonding strap. Compliance to this requirement will be demonstrated by design review using the installations.
25.1715(all)	Electrical bonding and protection against static electricity: EWIS	25-123	7	Compliance inspection will confirm the design has proper electrical bonding of electrical harness components that will be in accordance with GVII -GER-6588 Electrical Harness Installations Design Criteria Document, GAMPs 2605 Electrical Bonding Requirements, and GAB17G Bonding – Electrical & Lightning Protection.
25.1717	Circuit protective devices: EWIS	25-123	1	The design review will substantiate that all electrical wire gauge and materials are correct so that a fire or smoke hazard cannot be created under temporary or continuous fault conditions. Wire gauge will be chosen using guidance from SAE-AS50881 and AC 43.13-1B
25.1719	Accessibility provisions: EWIS	25-123	1	The design review will substantiate that all EWIS components have been placed to allow inspection and replacement as necessary for continued airworthiness. This analysis will take into account the AC 25.1701-1 and MSG-3 requirements. Compliance to this requirement will be demonstrated by design review using the installations.

Gulfstream

GVII Electrical Wiring Interconnect System Certification Plan

Regulatory Requirement	Description	Amdt.	MOC	Method Statement
25.1719	Accessibility provisions: EWIS	25.123	7	Compliance inspection will be performed using MIL-HDBK-522 to verify all aspects of 25.1719. In doing so, applicable aspects of EWIS Accessibility Provisions will be reviewed for compliance, in accordance with AC 25.1701-1, Certification of Electrical Wiring Interconnection System on Transport Category Airplanes.
25.1721(all)	Protection of EWIS	25-123	1	The design review will substantiate that all EWIS components have been placed to allow minimize damage from cargo, passengers or crew. This review will be conducted in accordance with AC 25.1701-1. Compliance to this requirement will be demonstrated by design review using the installations.
25.1721(all)	Protection of EWIS	25.123	7	Compliance inspection will be performed using MIL-HDBK-522 to verify all aspects of 25.1721. In doing so, applicable aspects of Protection of EWIS will be reviewed for compliance, in accordance with AC 25.1701-1, Certification of Electrical Wiring Interconnection System on Transport Category Airplanes.
25.1723	Flammable fluid fire protection; EWIS	25-123	1	The design review will substantiate that EWIS components located in each area where flammable fluid or vapors might escape by leakage of a fluid system must be considered a potential ignition source and will not contribute to the ignition of that source.
25.1723	Flammable fluid fire protection; EWIS	25-123	3	Compliance will be demonstrated by safety assessment. The safety assessment will substantiate that EWIS components located in each area where flammable fluid or vapors might escape by leakage of a fluid system must be considered a potential ignition source and will not contribute to the ignition of that source.
25.1725(all)	Powerplants: EWIS	25-123	3	Compliance will be demonstrated by safety assessment which will demonstrate that EWIS harness routing in the area of the aircraft determined to be part of an engine fire (ref GVII-GER-1070 GVII Electrical Wiring Interconnection Systems (EWIS) Safety Analysis) zone has been accomplished such that any damage to the electrical power and control systems of the aircraft will be minimized in the event of an engine rotor failure or of a fire originating within the engine which burns through the engine case.
25.1725	Powerplants: EWIS	25.123	7	Compliance inspection will be performed using MIL-HDBK-522 to verify all aspects of 25.1725. In doing so, applicable aspects of Powerplants EWIS will be reviewed for compliance, in accordance with AC 25.1701-1, Certification of Electrical Wiring Interconnection System on Transport Category Airplanes.
25.1727	Flammable fluid shutoff means: EWIS	25-123	1	The design review will substantiate that all EWIS within fire zones that are used in designated flammable fluid shutoff means and control are fireproof, or are located and protected so that any fire will not affect the fluid shutoff means. Wire within this zone will be qualified to military specification MIL-W-25038E. Alternatively, EWIS will be routed in a zone that will not affect operation of the shutoff means. Compliance to this requirement will be demonstrated by design review of the harness installations.

Regulatory Requirement	Description	Amdt.	MOC	Method Statement
25.1731(all)	Powerplant and APU fire detector system: EWIS	25-123	1	The design review will substantiate that EWIS that are part of each fire or overheat detector system in a fire zone must be fire-resistant and routed per GVII-GER-6588 and following guidance from AC 25.1701-1. The review will also ensure that it is protected against the possibility of false warnings resulting from fires in zones through which it passes. Compliance to this requirement will be demonstrated by design review of the harness installations.
25.1733	Fire detector systems, general: EWIS	25-123	1	The design review will substantiate that EWIS associated with any installed fire protection system, including those required by §§25.854 and 25.858, must be considered an integral part of the system in showing compliance with the applicable requirements for that system. Compliance to this requirement will be demonstrated by design review of the harness installations and wiring diagrams.
GVII IP S-01 25.1309(a)	Equipment, Systems and Installation Requirements: Use of ARAC Recommendations	N/A	1	Design review will demonstrate that the equipment and installation is appropriate for the intended function and performs as intended under the designed operating and environmental conditions.
GVII IP S-01 25.1309(b)	Equipment, Systems and Installation Requirements: Use of ARAC Recommendations	N/A	3	Compliance will be demonstrated by safety assessment which will demonstrate that EWIS harness routing in the area of the aircraft determined to be part of an engine fire (ref GVII-GER-1070 GVII Electrical Wiring Interconnection Systems (EWIS) Safety Analysis) zone has been accomplished such that any damage to the electrical power and control systems of the aircraft will be minimized in the event of an engine rotor failure or of a fire originating within the engine which burns through the engine case.
GVII IP S-01 25.1309(d)	Equipment, Systems and Installation Requirements: Use of ARAC Recommendations	N/A	3	Compliance will be demonstrated by safety assessment. The safety assessment will substantiate that each EWIS will be designed and installed so that catastrophic failure conditions are extremely improbable, do not result from a single failure and that each hazardous failure condition is extremely remote.
GVII IP S-08	Development Assurance Process in accordance with SAE ARP 4754A	N/A	1	The Gulfstream GVII EWIS development, validation and verification will be conducted in accordance with the principles and processes documented in SAE ARP4754A and GVII IP S-08. Compliance to these principles and processes will be verified by a series of system review audits and documented in the System Review Report (SRR) for the EWIS. This report will identify the life cycle process objectives, data outputs and artifacts including their released configuration data specified by ARP4754A, Appendix A for the EWIS. The report will also provide details of any findings or observations, their relationships to the ARP4754A objectives and how they were closed. This report will be updated and released for each system review.

5.2 FAA Issue Papers / EASA Certification Review Items

The FAA Issue Paper (IP) and / or EASA Certification Review Item (CRI) referenced in Table 3 are applicable to this certification effort. In the event of a difference between this Certification Plan and a project specific IP, the IP will take precedence until the Certification Plan is revised to accommodate the IP conclusions.

TABLE 3 APPLICABLE IPs AND/OR CRIS

FAA Issue Papers		
Identifier	Title	Type of IP/CRI
GVII IP G-01	Certification Basis	Certification Basis
GVII IP G-05	Administrative Collector Issue Paper	
GVII IP G-07	Qualification Standards for GVII and Carry-Over Equipment	Means of Compliance
GVII IP S-01	Equipment, Systems, and Installation Requirements: Use of ARAC Recommendations	Equivalent Level of Safety
GVII IP S-08	Development Assurance Process in Accordance with SAE ARP4754A	Means of Compliance
EASA Certification Review Items		
Identifier	Title	Type of IP/CRI
GVII CRI A-01	EASA Type Certification Basis	Certification Basis
GVII CRI A-06	Type Design Definition for EASA Validation	Means of Compliance
GVII CRI A-08	Validation Items and Significant Regulatory Differences	
GVII CRI F-08	Equipment, Systems, and Installation Requirements	Means of Compliance
GVII CRI F-28	Certification of Power Supply Systems for Portable Electronic Devices	Means of Compliance

The FAA Transport Airplane Directorate (TAD) Issues List, dated 03/30/2017, has been reviewed and potential affected areas for this system are identified in Table 4. An applicability evaluation will be conducted and disposition provided for each subject.

TABLE 4 TRANSPORT AIRPLANE DIRECTORATE ISSUES LIST

Subject	Description	Disposition
Fire extinguishing Plumbing and Wiring Connections	An issue paper may be needed to address the potential for cross-connection of systems. All fire extinguishing connections and wiring connections should be designed to preclude cross connection	Applicable - Certification is in accordance with AC 25.1701-1 for electrical connections. It is to be determined if an Issue Paper is needed to develop standards not provided AC 25.1701-1. See GVII-GER-1630 for means of compliance.
Clarification of the Use of ARAC Recommended AC25.1309-Arsenal	An issue paper documenting an equivalent safety finding may be needed to use the ARAC recommended AC25.1309-Arsenal and to clarify certain aspects of the AC.	Applicable – See GVII IP S-01 for the equivalent level of safety.

5.3 Equipment Qualification

The aircraft operating environment, including flight and temperature envelopes is defined in GVII-GER-0073, GVII Project Specific Certification Plan and detailed in the GVII-GER-1084, GVII Zone and Environment Definition document. The EWIS component will be qualified to operate within the defined aircraft operating environment or determined suitable based on system criticality while ensuring an acceptable level of safety for non-essential, non-flight critical functions.

Gulfstream will use, where applicable, existing qualification data from approved suppliers and previous Gulfstream aircraft programs. Gulfstream will review existing qualification data and provide detailed rationale as to how carry-over and supplier EWIS components will be checked

and verified. This existing qualification data may contain a mixture of approved and non-approved data. Individual equipment reports that contain carryover and supplier qualification data will be revised to reflect the review and applicability to GVII-G500. For areas identified during the review where existing data does not support a GVII-G500 requirement, delta qualification will be performed. Table 5 reflects EWIS components as related to equipment qualification standards.

Equipment qualifications can include combinations of test, analysis, service history, and/or similarity to validate the suitability of the component for the given application and aircraft operating environment. Deltas or new environmental qualification tests required will be performed in accordance with the appropriate industry or government standards such as RTCA/DO-160G, MIL DTL 38999, SAE AS 50151, European norms, EIA or Military Standards. **EWIS Component Qualification Requirements GVII-GER-3121** provides the minimum requirements, beyond environmental, that shall be considered for connector testing based on the criticality of the system for which they are associated.

In conjunction with the zonal requirement, EWIS components shall be reviewed against the specification in the appropriate table from GAC's EWIS Component Qualification Requirements GVII-GER-3121. Gulfstream will list the appropriate table from the GAC EWIS Component Qualification Requirements GVII-GER-3121 in each qualification plan and report, which contains connectors, to establish the means of compliance to align with the ODA requirements set forth in ODA memo AR-2016-002, ODA Administrator Guidance Memorandum - Means of Compliance for Environmental Qualification, as the EWIS specific Equipment Qualification Form (EQF) as a substitute for the DO-160 EQF. "New component" will be subject to full equipment qualification testing to one of these applicable standards. These test methods will serve as the basis for qualification either by test or analysis utilizing the following categories:

Note: The following classifications are consistent with the environmental qualification methodology and processes defined in GVII IP G-07: Qualification Standards for GVII and carry-over equipment.

- "Standard Parts" denotes components currently Military Qualified (QPL) for use on military aerospace programs in accordance with methods of compliance listed in FAA AC 21-29D Chg 1 Definition (3)(m) . This existing data is reviewed as part of the Harness Assembly design review for its application and capability for showing compliance to the GVII requirements.
- "Industry Qualified" denotes components currently available by suppliers that have available qualification data. Previous qualification data for these components will be reviewed against the appropriate environmental and connector standards listed above for acceptance in support of the harness assembly approvals for its application and capability for showing compliance to the GVII requirements. In areas where the data is unavailable to substantiate the component, delta qualification, similarity or analysis will be performed.
- "New Component" denotes a component that was designed for the GVII program. These components will be subject to a full qualification testing to applicable environmental and connector standards listed in Table 5 and GAC'S EWIS Component Qualification Requirements GVII-GER-3121.
- The service history of "same component in same aircraft environment" denotes components currently on an FAA approved 14 CFR Part 25 type design whose existing qualification(s) data will be shown to be applicable to and demonstrate compliance to the GVII-500 program requirements through an analysis, and include evidence of the previous approval or through a service history review.
- "Similar component" denotes components installed on an FAA approved 14 CFR Part 25 type design that will be subjected to delta qualification testing for the GVII-500 program. Previous qualification data for these components will be scrutinized, both at the component level and at the aircraft level, based on changes required for GVII-500. In areas where data are unavailable to substantiate these changes and/or where existing

Gulfstream

GVII Electrical Wiring Interconnect System Certification Plan

data does not support the GVII-500 requirement, delta qualification will be performed. A similarity analysis will be conducted for unchanged areas and included in the qualification report.

- Non-Essential, Non-Required Aircraft Cabin EWIS components will be evaluated using methods provided in AC 20-168 and DO-313.

GER-0662 EWIS Component Review identifies all EWIS component's qualification data and approval for aircraft usage. This document contains acceptable usage by aircraft zone, system functionality, and applicable limitations for these EWIS components.

See GVII-GER-1084, GVII DO-160G Zonal Requirements, for the aircraft environment and characteristics of zones listed in **Table 5**.

TABLE 5 COMPONENT LOCATIONS AND ENVIRONMENT

Component	Location	Aircraft Environment	Change Description / Classification	Qualification Method
Various Wires, cables, Connectors, Clamps, Shields, Braids, Labels, feed-through connectors, Pressure seals, Fiber Optics (See 14 CFR 25.1701)	Exterior	See GVII- GER-1084	Similar component to GVI / same environment	GVII IP G-07 Analysis by Gulfstream and testing as required
Various Wires, cables, Connectors, Clamps, Shields, Braids, Labels, feed-through connectors, Bus bars, Cable tie devices, Pressure seals, junction boxes, racks, distribution panels, Fiber Optics (See 14 CFR 25.1701)	Interior	See GVII- GER-1084	Similar component to GVI / same environment	GVII IP G-07 Analysis by Gulfstream, and testing as required
Various Wires, cables, Connectors, Clamps, Shields, Braids, Labels, (See 14 CFR 25.1701)	Wing	See GVII- GER-1084	Similar component to GVI / same environment	GVII IP G-07 Analysis by Gulfstream, and testing as required
Various Wires, cables, Connectors, Clamps, Shields, Braids, Labels, Bus bars, Pressure seals, junction boxes (See 14 CFR 25.1701)	Tail Compart- ment	See GVII- GER-1084	Similar component to GVI / same environment	GVII IP G-07 Analysis by Gulfstream, and testing as required

Component	Location	Aircraft Environment	Change Description / Classification	Qualification Method
Various Wires, cables, Connectors, Clamps, Shields, Braids, Labels, feed-through connectors, Pressure seals (See 14 CFR 25.1701)	Wheel Wells	See GVII-GER-1084	Similar component to GVI / same environment	GVII IP G-07 Analysis by Gulfstream, and testing as required

5.4 Software / Hardware Design Integrity Level

Not applicable. No software will be included in this certification plan.

5.5 Hazard Assessment

The analysis documented in the aircraft Functional Hazard Assessment (FHA) will identify the quantitative and physical safety derived requirements of the GVII family of aircraft. GVII-GER-1080, *GVII Aircraft Functional Hazard Assessment* will define the aircraft level requirements down to a point that it can be handed off to a system FHA. The individual system level FHAs will document the system functional failure conditions and assign the criticality classification based on the effects of each identified condition mode. Hazard development and validation will be performed using the guidance of SAE ARP4761 and will tracked in the individual system level certification plans.

5.6 System Safety Analysis

A safety assessment of EWIS will be performed to show compliance with section §25.1709 "System Safety EWIS". The analysis will be based on a qualitative and quantitative approach to assessing EWIS safety as defined in AC 25.1701-1. The safety assessment will consider the effects that physical failure modes of EWIS will have on the functional failure conditions as defined in the various System and Aircraft level Safety Analysis. The assessment will show that each EWIS failure considered hazardous is extremely remote and that each EWIS failure considered to be catastrophic is extremely improbable and will not result from a single failure. Compliance to the safety requirements of §25.1709 "System Safety EWIS" will be documented in GVII-GER-1070, *GVII Electrical Wiring Interconnection Systems (EWIS) Safety Analysis* using the method defined in GAC-WM-229 *System Safety Wiring Analysis Work Method*. Compliance to the safety requirements of GVII Issue Paper S-01 to §25.1309(b) will be addressed specifically in the respective functional system level certification plans. The final functional hazards and their classifications will be documented in GVII-GER-1075, *GVII Aircraft Safety Assessment*, and the various SSAs. The classification of the hazards will be validated by analysis, test, simulation, demonstration, or traceability in accordance with the process defined in GVII-GER-8158 as documented in the *Aircraft System Certification Plan (GVII-GER-2529)*.

5.7 Test Articles

No flight testing is required for the certification of EWIS. Equipment qualification testing will be conducted at supplier facilities as described in **Table 6**

Gulfstream

GVII Electrical Wiring Interconnect System Certification Plan

Table 6 Test Articles

Test Article	Facility / Location	Witnesses	Date	TIA Req'd
Production Aircraft P2 (compliance inspections)	Gulfstream / Savannah, GA	Gulfstream ODA ARs	1 st Qtr 2016	No
Glenair Composite Backshells for use with Radial EPXB Series Connectors	EA Labs, Santa Ana, CA	Gulfstream ARs	3 rd Qtr 2015	No
Clickbonds for de-icer and temperature endurance	Clickbond, Carson City, NV	Gulfstream ARs	1 st Qtr 2014	No
EVS Amphenol Connector	Amphenol QC Lab, Sydney, NY	Gulfstream ARs	2 nd Qtr 2015	No
FQMS Amphenol Connector	Amphenol QC Lab, Sydney NY	Gulfstream ARs	2 nd Qtr 2015	No
ADSP Amphenol Connector	Amphenol QC Lab, Sydney NY	Gulfstream ARs	2 nd Qtr 2015	No
AFT Spar Harness	Icore, Santa Rosa, CA	Gulfstream ARs	1 st Qtr 2015	No
High Temperature Fire Resistant Cable	Carlise, St Augustine, FL	Gulfstream ARs	3 rd Qtr 2017	No

IOGM Backshell	Honeywell, Phoenix, AZ	Gulfstream ARs	3 rd Qtr 2015	No

5.8 Human Factors Considerations

Not applicable. There are no Human Factors aspects associated with EWIS.

5.9 GVII IP S-08 Issue Paper Considerations

Gulfstream acknowledges EWIS is a system and installation that requires a process to assure that errors or omissions in requirements or design have been identified and corrected to the degree that the system, as implemented, satisfies applicable certification requirements. Since EWIS is not a complex system but benefits from a process assurance plan, Gulfstream's Electrical Harness Installation and Electrical Applications team will create an addendum to the Aircraft Systems Development Plan Gulfstream identified in the GVII IP S-08 Issue Paper response for EWIS to satisfy the systems development assurance unique to EWIS for the following:

- Planning
- Aircraft and Systems Development and Requirements Capture
- Requirements Validation
- Implementation Verification
- Configuration Management
- Process Assurance
- Certification and Regulatory Coordination

The addendum is listed here for FAA concurrence.

5.9.1 SR#1 Planning Review

For Gulfstream's EWIS, the Interim Type Board review and the release of the EWIS addendum satisfies the Planning Review. The addendum will specify the release of and maintenance of GVII-GER-1501 for the selection of electrical parts application, connector and wire identification, and review checklists which senior team members will utilize to review electrical harness designs. Additionally for electrical harness installation the addendum will identify the release and maintenance plan for GVII-GER-6588, and acknowledge the requirements in SAE-AS50881 to be those of the GVII EWIS. Additionally the plan will acknowledge carrying forward the zonal separation of GVII-GER-1757 will apply to the GVII EWIS and the releases of and maintenance of GVII-GER-0404 for EMI separation and bonding requirements. To support subsequent stages of this process and Electrical Harness Installation review checklist which senior team members will utilize to review harness installation designs. The addendum will also identify the non-EWIS systems wire diagrams which in turn create the EWIS electrical harnesses and subsequent installation. Any deviations to these plans will be captured during the validation phase and a plan to verify identified in the EHI verification plan. The planning review also captures the process for finding compliance to 25.1709 via the work method captured in GAC-WM-229. Lastly, configuration management of the EWIS harness and installation will be via the FAA approved SmarTeam System as documented in GVII-GER-6947.

5.9.2 SR#2 Validation

For EWIS, the addendum will identify a Validation Review. This review will be conducted as a result of the AFHA and preliminary Common Cause analyses. Initial harness installations will be reviewed for Common Causes and rerouted if deemed vulnerable. Likewise, Wire Diagrams will be reviewed against the Wire Diagram Job Aide to insure the Wire Diagrams implemented the Schematics and that no Common Cause event can occur as well as independence for redundancy is maintained as implemented in the Wire Diagram. The output of this review is the creation of the Wire Harness Assembly and the Wire Harness Installations. Any deviations to the plan will be recorded in the deviations requirements model since the deviations are model / GVII-GER-1084 zone based. For non EWIS System parts such as circuit breakers, diodes, resistors etc that are part of the wire harness, or panel assemblies, the review will ensure these are suitable parts which are specified in the Wire Diagram and hence a compliance finding will document this validation. See specific compliance matrix for the applicable FARs. A verification plan for these deviations will be captured in the EHI verification plan. The AR simultaneous approval and release of the Wire Harness Installation and supporting Wire Harness Installation will be considered the closure activity for this review.

5.9.3 SR#3 Verification

For EWIS the addendum will identify a Verification Review will be conducted as part harness assembly and installation/ manufacturing process which is overlooked by EWIS qualified manufacturing review board engineers, who will create DRDIs for QC/IAR and EARs. The later will approve via the program's engineering AR disposition of deviations found during QC build and conformity inspection process. These DRDIs will spawn engineering change requests which will then be ascertained if they are product improvements, compliance (Class 1) or safety issues (Class 2). Those that are compliance or safety issues will have their corrective actions implemented into the design data. For those components that lack appropriate data, verification will come from the completion of the qualification plans. Other components that are new to Gulfstream that do have design and test data will be verified by a desktop review of the data to assure the component is appropriate. Completion of all defined Safety of Flight (SOF) testing must be completed prior to closure of this review. A safety of flight review will be conducted for EWIS since EWIS is integral with aircraft safety. As part of this review all verification activities deemed required via the EHI verification plan, AR acceptance of DRDIs with ECRs for Class 1 and Class 2 spawned and acceptance of the safety review will be considered the closure activity for this review.

5.9.4 SR#4 Final Review

For EWIS the addendum will identify a final review. This review will insure the safety analysis conducted per GAC-WM-229 was AR approved. Also the review will insure all non-safety of flight qualification reports are AR approved. Additionally, any remaining actions from SR#2 or SR#3 are closed and Class 1 and Class 2 ECRs are implemented are AR approved and implemented in the TC design. Lastly, a Compliance Inspection of the 2nd production aircraft will be conducted in accordance with GVII-GER-1164, and documented in GAC-CR-03959, GVII EWIS Compliance Inspection Report to ensure the process / tools / procedures and methods result in a compliant system.

5.10 EWIS System Definition and Requirements General

GVII-G500 aircraft wiring will be designed and installed in accordance with AC 25.1701-1. As such any system that contains EWIS will undergo compliance review to demonstrate airworthiness by utilizing the electrical wiring interface system requirements of SAE-AS50881. Those systems with wiring that are not maintained by aircraft service personnel are line replaceable units hence their wiring is subject to design and qualification reviews per the appropriate qualifications outlined in the EWIS exemption of 14 CFR 25.1701(b).

As SAE-AS50881 forms the basis of systems requirements for compliance. Design reviews and deviations reviews will be conducted for each applicable requirement. All deviations will be

Gulfstream

GVII Electrical Wiring Interconnect System Certification Plan

documented in the model based deviations requirements model and will undergo verification that compliance is satisfied.

For GVII-G500 aircraft, all designs and components are reviewed to satisfy a 20 year service life. It is not anticipated, but when the expected service life will not meet this requirement, replacement intervals will be defined in the ICA as required by 14 CFR 25.1729.

EWIS Wire Harness Component Requirements / Qualifications

Wire harness components (wire, connectors, splices, etc.) are qualified under 14 CFR 25.1703 for use on the aircraft are based on the performance requirements of 14 CFR 25.1705 which itself calls the requisite 900 and 1300 series FARs respectfully. For systems that have major or higher failure classification, the EWIS components performance standards are defined in MIL-DTL-38999 for signal connectors and SAE-AS5015 for power connectors. As this standard utilizes Electronic Component Associations' EIA testing method, so too will compliance be found by reviewing and developing EWIS components to this standard and method (see **Table 6** as well as meeting the requirements stated in GVII-GER-1084).

Design requirements for the electrical wire harness assemblies will be defined in GVII-GER-1501, Design Guidelines for Applications Engineers, for requirements not covered in SAE-AS50881 and Gulfstream specific details such as wire selection, dissimilar metals combinations, SWAMP area specific requirements, proper labeling, interfacing systems support, proper connector and accessory selection will be documented within.

In our efforts to satisfy the service life requirement and eliminate issues with arc tracing, Gulfstream will use almost exclusively seamless composite wire which has shown to be superior in moisture retention, wire to wire abrasion both in like to like and to dissimilar, abrasion, and arc tracing. It is a multilayer wire with the outer layer of PTFE. Handling and installation of this wire type will be defined in the AC 25-26 Standard Wire Practices Manual GVII-GER-2023.

Wire gage selection shall support circuit breaker devices whether from the ESC, MPT or thermal and follow the guidance published in AC 43.13-1B Chapter 11 where all wires will be assumed in to be in a bundle. In some cases higher temperature rated wire will be selected for zones of the aircraft where the operating temperature or where current loading in a bundle dictates.

To satisfy the aircraft level requirements, silver plated conductors are not allowed for any EWIS device when utilized outside the pressurized cabin.

In accordance with ODA Administrator Guidance Memorandum AR-2015-002, Gulfstream will utilize wiring and wiring components that satisfy 14 CFR 25.1713(a) as well as 14 CFR 25.1713(c) for wire insulation and when in a fire zone 14 CFR 25.1713(b). Compliance for 14 CFR 25.1713(a) and (c) previously approved data or QPL data will be documented in GVII-GER-17987 EWIS Fire and Smoke Protection Review. For those components used in the fire zone will use only QPL parts. This will be part of the APU, IPPS, and thrust reverser qualification data review. For those items that do not have previously approved data or are not on the QPL, a burn test will be conducted to demonstrate compliance.

EWIS Systems and Functions

As part demonstrating compliance to SAE ARP 4754A and GVII IP S-08, the SR#2 Validation review will validate the EWIS requirements documented in the wiring diagram satisfy the systems requirements documented in the System Technical Requirements Document (TRD) and Systems Requirements Document (SRD). Furthermore, during the installation review the criteria of SR#3 Verification review assure the installation of the harness satisfies the systems requirements.

In regards to 14 CFR 25.1705(b)(2) the installation review will also employ a clamp failure study as part of the installation requirements model to establish if the clamp interval supports the tenants of compliance for 14 CFR 25.981 as documented in GVII-GER-1629 utilizing the SAE ARP 5754A process. In addition the EWIS installation both in tank and adjacent to will utilize

installations, components and processes that support the fuel tank ignition prevention item and systems assessment.

In regards to 14 CFR 25.1705(i)(3) the flap drive failure is protected by a composite armor that is integrated in the harness. This special harness is built for Gulfstream by a specialist in harness design and manufacturing, ICorp, a Zodiac company. The composite armor will be shown to withstand an equivalent failure strike via test while maintaining the integrity of the flight control signal and power cable protected within.

EWIS Installation

Installation requirements not covered in detail in SAE-AS50881 will be defined in GVII-GER-6588, Electrical Harness Installations Design Criteria Document. Issues such as moisture protection, usage of plastic restraints, calculating bundle bend radius, usage/sizing of metallic overbraid, connector/accessory torque values, etc. will be covered in this requirement.

Electrical Wiring Interconnect System Design Criteria requirements, every sixth wire harness support position will be an SAE-AS21919 type, or equivalent, cushioned clamp device. Between the cushioned clamp positions, mounting plates or brackets with nylon supports that accept MS3367 plastic tie-down straps will be used to secure wire harness assemblies into the aircraft. Exceptions to this installation practice will be the main aircraft power feeder cables (entire installation). In these cases, wire harnesses will be secured using SAE-AS21919 type cushioned clamps for the entire harness assembly length.

All mechanical support brackets are designed to support load requirements of the electrical wire harness assemblies. Design requirements are as defined in GVII-GER-0183, P42 Stress Criteria document. Brackets will be reviewed and approved by both the electrical systems AR and a structural systems AR. Adhesive supports will be used where appropriate. Adhesives and the coordinating supports will be shown to be appropriate to support the expected life via qualification tests.

Like EWIS installed in the forward, aft and distribution panels component installations that utilize wire harnesses that are commonly referred to as pigtails will require the pigtails that are installed and maintained in accordance with GVII-GER-2023 will undergo EWIS compliance review.

EWIS Separation

System wires on the aircraft are segregated by “separation category” per GVII-GER-0404, GVII EMC Guidelines for Wiring Separation, Shielding, and Grounding. GVII-GER-0404 takes in to account MIL-STD-464C, MIL-STD-461F and MIL-B-5087B for guidance and installation requirements regarding EMI concerns. Wires of same signal types are grouped together into assemblies for installation on the aircraft. For aircraft grounds and connectors MIL-DTL-83413 is used for guidance along with the GVII-GER-0404 for classification into separate categories. Electrical wire harness assemblies In some cases, additional electromagnetic interference (EMI) protection is required in the form of both metallic overbraid and EMI-rated backshells.

Models show spatial separation details between wire harness assemblies and other systems components, per GVI-GER-1757, Systems Installation Separation Requirements for GVI Aircraft and GVII-GER-6588, Electrical Wiring Interconnect System Design Criteria Document. Installations that require a deviation from the requirement listed in the design documents will be listed in GVII-GER-1179, GVII EWIS (Electrical Wiring Interconnect Systems) Deviations Report per the EWIS SAE ARP 4754A process.

EWIS Labeling

System wires in the aircraft are printed with the appropriate circuit function identifier using laser or ink jet marking per SAE-AS50881, Wiring Aerospace Vehicle.

EWIS Bonding

Gulfstream

GVII Electrical Wiring Interconnect System Certification Plan

Bonding jumpers used in GVII aircraft are short and direct as possible electrically to clean metal to metal joint formed by removal of all electrically insulating finishes and coating from the contact surface of the materials being joined before assembly in accordance with GAT11F, GAB17G and MIL-DTL-5541 per SAE-AS50881. Bolted connections are used by utilizing a split lock washer with plain or self-locking hardware to ensure a tight connection under all conditions. Overcoat is utilized per GAB17G when outside the pressure vessel as to prevent corrosion and to support compliance to 14 CFR 25.1705(b)(2) and 25.981. The bonding EWIS components are designed and installed so that cross sectional area of bonding path used for primary and secondary bonding paths ensure that low electrical impedance is obtained and maintained throughout the expected service life of this component to satisfy 14 CFR 25.1715, AC 25.899-1 and AC 25.1360-1. Location of Bonding jumper is selected so that inspection, test, repair and replacement can be undertaken with minimum of Aircraft disassembly per 14 CFR 25.1719. In process inspection and in service are conducted by Quality Assurance to verify compliance, this includes general visual inspection of surfaces prior to and after installation of bonding strap per the Instructions for Continued Airworthiness to satisfy 14 CFR 25.1729 using procedures in the SWPM (GVII-GER-2023) per AC 25-26.

EWIS Accessibility

For the GVII family of aircraft, the EWIS system will be installed such that human physical access is possible. This access is for installation, inspection, and maintenance. For the vertical tail a small number of areas in which EWIS components are installed will have limited access. Hence special design and materials attention will be paid to show these installations utilize materials and redundancies such that limited inspection and access is all that is required for the service life of the aircraft. This special design and material selection will be the orientation of the harness clamping, separation, and routing. The system signals that are routed through this zone will also be interrogated to ensure that in the event of a fault, proper system fault indication will be provided. In addition to the design, the EZAP analysis will support **that** this zone is compliant to applicable requirements of the GVII program. For all other areas, design review will be used to **ensure** compliance to 14 CFR 25.1719 as well as the EZAP for the ICA compliance.

APU EWIS

All EWIS aspects of the APU, including control, monitoring, and IDG will be developed and qualified utilizing the GVII IP S-08 Issue paper process. Compliance will follow the same process using the requirements of AC 25-1701-1, SAE-AS50881, GVII-GER-1084, GVI-GER-1757, GVII-GER-0404, and GVII-GER-6588. Since this is an existing design, which carries TSO C77b, the final review (SR #4) will be conducted as a desktop review of the APU EWIS design data and requirements; and only then will an approval be granted.

Engine EWIS

All EWIS aspects of the IPPS (Integrated Power Plant System), including engine control, monitoring, IDG, Fire Detection and Thrust Reversers will be developed and qualified utilizing the GVII IP S-08 Issue paper process. Compliance will follow the same process using the requirements of AC 25.1701-1, SAE-AS50881, GVII-GER-1084, GVI-GER-1757, GVII-GER-0404 and GVII-GER-6588. As with the airframe, a compliance inspection will be conducted to satisfy SR #4 requirement of the GVII IP S-08. Deviations to these requirements will be documented and substantiated in a separate deviations report. Installation of the EWIS compliant harnesses will support functional and reliability flight testing.

Landing Gear EWIS

All EWIS aspects of the Landing Gear will be developed and qualified utilizing the GVII IP S-08 process. Compliance will follow the same process using the requirements of AC 25.1701-1, SAE-AS50881, GVII-GER-1084, GVI-GER-1757, GVII-GER-0404 and GVII-GER-6588. Due to the gear kinematics verification review (SR-03) will be conducted after the Nose and Main Landing Gear Endurance Tests as well as the main landing gear touchdown qualification test. Finally, a

compliance inspection will be conducted on the airframe to satisfy SR #4 requirement of the GVII IP S-08 issue paper.

EWIS Design Tools

Using CATIA V5, wire harness assembly models are grouped together into installation models. Installation models will provide locations and mechanical components necessary to facilitate installation of wire harness assemblies into the aircraft.

EWIS Brackets / Clamping Installations

All Mechanical Brackets used to support Electrical Wiring Interconnect System have been designed to perform their intended function per 14 CFR 25.1703, 25.1707 and 25.1721. Primary supports of wiring harnesses are provided by SAE-AS21919 loop type metal cushion clamps and their physical properties are compatible with their installation environment per AS50881 and GVII-GER-1084. Secondary support of wiring harnesses is provided by plastic cable straps compatible with AS23190 which are installed with tools in accordance with MS90387-1. Inspection tapes are added in key areas adjacent to clamps visible for inspection to support the initial build/service and EZIP/EZAP demonstrate continued compliance to 14 CFR 25.1703, 25.1707 and 25.1721 . Pink flag marker is installed at first clamp point of harness lay. White flag marker tape is installed at last clamp near connector mating location and at slack control point. Capital HarnessXC will process wire bundle size based upon wire harness content data which will be used to size the clamps close to final design.

6.0 CONFORMITY

A separate conformity plan is included within this system level certification plan. Appendix C contains a list of test articles that will be used to generate the compliance data. Part and test set-up requirements will be included in the applicable test plans. See GVII-GER-0073, GVII Project Specific Certification Plan for more details on conformity and GOP0004, Gulfstream ODA Operations Manual.

An inspection of a complete and installed EWIS is required for conformity. This inspection will be conducted using guidance of MIL-HDBK-522 Guidelines for Inspection of Aircraft Electrical Wiring Interconnect and the inspection chapters of GVII-GER-2023.

Part conformity (wire harness assemblies) will be conducted complying GVII-GER-0073 and related work methods and ODA procedures. The GVII-600 and GVII-400 electrical harnesses are a derivative of the GVII-500 EWIS design and are considered substantially similar; therefore, any level one installation that carries the same part number as the GVII-500 equivalent (i.e. 73P123456L is substantially similar to 72P123456L) will not be conformed. Applicable new components will carry a unique 73P or 71P part number and will be conformed accordingly.

A compliance inspection plan will be conducted as part of our SR#4 Final review. This inspection will occur on the second production aircraft. Because these engineering compliance inspections need to be conducted during the aircraft build, an in-process conformity inspection plan will be developed. Gulfstream will define a phased conformity process in the compliance inspection plan (GVII-GER-1164) that works with the production phases such that access is provided to QC, IAR and EAR performing their respective inspections. This process will be documented and carried out in accordance with the **GVII-GER-1164 GVII EWIS Inspection Plan**.

6.1 Conformity for Component and Assembly Level Testing

All components subject to qualification and detail part level testing will receive an FAA conformity inspection. If a component subject to qualification testing is manufactured under an existing approval, the requirement for FAA conformity may be waived by the Engineering AR responsible for the test if all MRB activity associated with the component is available and traceable to the test article.

6.2 Conformity for Ground Test Articles (S72, F72)

All applicable level one installations will be FAA conformed at the aircraft level (S72, F72). Applicable carry-over components do not require FAA conformity as they are manufactured under existing approval. Applicable new components will be FAA conformed if required for test on these ground test articles.

6.3 Conformity for Flight Test Articles (72001 – 72005, P2)

All applicable level one installations will be FAA conformed at the aircraft level. The flight test articles (72001 – 72005) are not expected to be utilized for EWIS certification. The production article P2 will be utilized for EWIS compliance inspections. In support of these inspections, all applicable wire harness installations will be conformed. Detail component parts will be conformed per the criteria listed below:

- All parts designated critical to safety of flight
 - All new components will be conformed. All carry-over components will not be conformed, as they are manufactured under an existing approval. This includes any part designated as critical to safety of flight.
- All parts whose failure have been determined to be catastrophic or hazardous through the FHA process.
 - All new components will be conformed. All carry-over components will not be conformed, as they are manufactured under an existing approval. This includes any part whose failure has been determined to be catastrophic or hazardous through the FHA process.
- All parts produced using new, critical, or distinctive processes
 - There are no parts produced using new, critical, or distinctive processes.
- Any part integral to a test or test data that substantiates the type design
 - All parts will be tested as part of certification flight testing, and at some point during the testing will contribute to the substantiation of the type design data. All new components will be conformed. All carry-over components will not be conformed, as they are manufactured under an existing approval.

6.4 Engine Harness Conformity

Any engine harness subject to EWIS compliance inspections to confirm design satisfies EWIS harness design requirements that is defined by the Transport Canada type certificate, the FAA conformity may be waived by the Engineering AR.

7.0 SCHEDULE

7.1 Significant Milestones

Table 7 below provides an anticipated schedule for certification of the EWIS system on the GVII-G500 aircraft:

TABLE 7 SIGNIFICANT MILESTONES

Milestones	Completion Dates
EWIS Compliance Inspection	3Q 2015
System Summary Compliance Report Complete and Submitted	3Q 2017
Final Type Board Meeting	4Q 2017

8.0 ODA UNIT MEMBERS / PROJECT PERSONNEL

8.1 Project Personnel

Table 8 below provides a list of Gulfstream personnel that will support this project.

TABLE 8 PROJECT PERSONNEL LIST

Name	AR Number	Job Title
Steven Firra	AR-E-1019	Electrical/Electronic Equipment/Systems (Primary), EWIS Flammability and Safety
Thomas Fancy	AR-E-1004 /AR-E-3051	Electrical/Electronic Equipment/Systems (Alternate) Retired/Consultant
Craig Buckthal	AR-E-1160	Electrical/Electronic Equipment/Systems (Alternate)
Bradley Huennekens	AR-E-1116	Electrical/Electronic Equipment/Systems (Alternate)
Nick Chan	AR-E-1134	Electrical/Electronic Equipment/Systems (Alternate)
Jon Cox	AR-E-1135	Electrical/Electronic Equipment/Systems (Alternate)

8.2 Delegation Limitations and Stipulations

FAA and/or Gulfstream ODA Administrators are requested to specify any limitation, stipulations, restrictions, etc. that the Organization Management Team (OMT) or the ODA will place on any of the requested delegations / authorizations.

The Gulfstream ODA does not have authority for 14 CFR 25.1709. The associated documents demonstrating compliance will be submitted to the FAA for approval (shown in Appendix A as [blank] in the approve/recommend column).

9.0 CONTINUED AIRWORTHINESS INFORMATION

A maintenance program for EWIS in accordance with AC 25.1701-1 and AC 25-27A is defined in Aircraft System Certification Plan GVII-GER-2529.

Gulfstream will develop a Standard Wiring Processes Manual for Gulfstream Aircraft that will encompass wiring practices, following the guidance and format of AC 25-26. Additionally, an ICA source document, GVII-GER-2366 GVII Electrical Wiring Interconnect System ICA Requirements that contains references to the documents that include the following information:

- Identification of any EWIS mandatory replacement times for inclusion in the Airworthiness Limitations section of the ICA
- EWIS maintenance and inspection requirements developed with an EZAP
- EWIS maintenance practices in a standard format
- EWIS separation requirements
- EWIS identification methods and requirements for identifying any changes to EWIS
- Electrical load data and instructions for updating data
- A document that contains the EWIS maintenance inspection requirements or identifies their location in other ICA documents

From the FAA approved ICA source document, GVII-GER-2366, the appropriate EWIS instructions for continued airworthiness will be incorporated into the appropriate chapters of the aircraft maintenance manual and will be easily recognizable as EWIS ICA. The GVII maintenance program will be submitted to the FAA aircraft certification office or office of the Transport Airplane Directorate for approval/acceptance as stated in the GVII Aircraft System Certification Plan (Ref Section 2.9 Related Certification Plans.)

APPENDIX A COMPLIANCE CHECKLIST

25.1360(b)	Precautions against injury	25-123	72P2597935P	HARNESS ASSY - SYSTEM MONITORING	1	The temperature of any part that may be handled by a crewmember during normal operations will not cause dangerous inadvertent movement by the crewmember or injury to the crewmember as described in this regulation. Design review of design data will be used to show findings of compliance. Compliance findings will be limited to the mechanical aspects of the installation of electrical components and their corresponding support structure only.	A	N/A	EL	4/21/2014	X

25.1703(a)(1)(2)(3)(4)(b) Function and installation: EWIS 25-123 73P2763005N001 ACTUATOR INSTL - MIDDLE SPOILER, LH 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(b) Function and installation: EWIS 25-123 73P2763006N001 ACTUATOR INSTL - MIDDLE SPOILER, RH 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(b) Function and installation: EWIS 25-123 73P2763007N001 ACTUATOR INSTL - OUTBOARD SPOILER, LH 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(b) Function and installation: EWIS 25-123 73P2763008N001 ACTUATOR INSTL - OUTBOARD SPOILER, RH 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(b) Function and installation: EWIS 25-123 73P2765009N001 SYSTEM INSTL - SPOILER CONTROL ELECTRONICS, CTR MID 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(b) Function and installation: EWIS 25-123 73P2797692L HARNESS ASSY - FBW PEDESTAL RIGHT NO. 2 1 See main document section 5.1 for Method Statement																						
25.1703(a)(1)(2)(3)(4)(b) Function and installation: EWIS 25-123 73P2816021N001 TUBING AND COMPONENT INSTL - FUEL RETURN, HEATED, LH 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(b) Function and installation: EWIS 25-123 73P2816022N001 TUBING AND COMPONENT INSTL - FUEL RETURN, HEATED, RH 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(b) Function and installation: EWIS 25-123 73P2821021N001 TUBING AND COMPONENT INSTL - PRESSURE REFUEL, WING, LH 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(b) Function and installation: EWIS 25-123 73P2821022N001 TUBING AND COMPONENT INSTL - PRESSURE REFUEL, WING, RH 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(b) Function and installation: EWIS 25-123 73P2826400N001 SYSTEM INSTL, FUEL - APU, AFT MID 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(b) Function and installation: EWIS 25-123 73P2901997N001 BRACKET INSTL, LINE SUPPORT - EMP, LEFT HORZ STAB 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(b) Function and installation: EWIS 25-123 73P2911011N001 COMPONENT INSTL - RESERVOIR, SYSTEM 1 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(b) Function and installation: EWIS 25-123 73P2911081N001 COMPONENT INSTL - ACCUMULATOR, SYSTEM 1 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(b) Function and installation: EWIS 25-123 73P2911962N001 LINE INSTL, HYDRAULIC - INBD BRAKE, AFT MID, WTBFB 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(b) Function and installation: EWIS 25-123 73P2911997N001 LINE INSTL, HYDRAULIC - SYSTEM 1, EMP, LEFT HORZ STAB 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(b) Function and installation: EWIS 25-123 73P2912012N001 COMPONENT INSTL - RESERVOIR, SYSTEM 2 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(b) Function and installation: EWIS 25-123 73P2912081N001 COMPONENT INSTL - ACCUMULATOR, SYSTEM 2 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(b) Function and installation: EWIS 25-123 73P2912970N001 LINE INSTL, HYDRAULIC - SYSTEM 2, AFT MID, BAGGAGE 1 See main document section 5.1 for Method Statement.

25.1703(a)(1)(2)(3)(4)(b)(d)	Function and installation: EWIS	25-123	72P9711191L	HARNESS ASSY - CONTROL, LEER	1	The design review will substantiate that all components that comprise the EWIS under 25.1701 are being designed and manufactured, per engineering provided system wiring diagrams, to ensure proper system functionality. Special attention is paid to proper wire sizing and wire type selection, based on GVII-GER-6588 guidelines and that power feeders will allow for deformation of the fuselage. Also, all EWIS components will be reviewed per GER-0662 for appropriate design and limitations. The harness assemblies and installations will also be reviewed to ensure that designs minimize mechanical strain or possibilities for moisture accumulation. This design review will take guidance from GVII-GER-6588 and AC 25.1701-1 Certification of Electrical Wiring Interconnection Systems on Transport Category Airplanes.	A	N/A	EL	12/5/2016	X

25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 72P9763687N001 HARNESS INSTL - NO 1 RAD ALTIMETER RCVR ANT 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 72P9781001N001 HARNESS INSTL - I RM, WING TO BODY FAIRING 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 72P9791001N001 HARNESS INSTL - I RM, NOSE WHEEL WELL 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 72P9791891L HARNESS ASSY - ZONE, NOSE WHEEL WELL 1 See main body section 5.1 for Method Statement																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 72P9791891N001 HARNESS INSTL - ZONE, NOSE WHEEL WELL 1 See main body section 5.1 for Method Statement																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 72P9792892L HARNESS ASSY - ZONE, MAIN WHEEL WELL, LH 1 See main document section 5.1 for Method Statement																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 72P9792892N001 HARNESS INSTL - ZONE, MAIN WHEEL WELL, LH 1 See main document section 5.1 for Method Statement																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 72T2519105C025 SUBSTRATE - COMPOSITE PLY 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 72T9701500H001 Test Substrate - Honeycomb 1 See main document section 5.1 for Method Statement																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 72T9701500S017 TEST SUBSTRATE - CLAD ALUMINUM 1 See main document section 5.1 for method statement.																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 72T9701500S019 TEST SUBSTRATE - PRIMED CLAD ALUMINUM 1 See main document section 5.1 for method statement.																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 72T9701500S023 TEST SUBSTRATE - PRIMED AND TOP COATED ALUMINUM 1 See main document section 5.1 for method statement.																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 73P1197113N001 DECAL INSTL - ELEC EQUIP, RACK, FWD, LH 1 See main body section 5.1 for Method Statement																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 73P1197114N001 DECAL INSTL - ELEC EQUIP, RACK, FWD, RH 1 See main body section 5.1 for Method Statement																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 73P1197200N001 DECAL INSTL - ELECTRICAL, LH, FWD MID 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 73P1197400N001 DECAL INSTL - ELECTRICAL, LH, AFT MID 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 73P1197403N001 DECAL INSTL - ELEC EQUIP, RACK, AFT MID, LH 1 See main document section 5.1 for method statement.																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 73P1197404N001 DECAL INSTL - ELEC EQUIP, RACK, AFT MID, RH 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 73P1197600N001 DECAL INSTL - ELECTRICAL, WING, LH 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 73P1197601N001 DECAL INSTL - ELECTRICAL, WING, RH 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 73P3500900N001 PANEL INSTL - OXYGEN SYSTEM CONTROL, FWD 1 See main document section 5.1 for method statement.																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 73P5797013N001 SUPPORT INSTL - FWD SPAR, LH 1 See main document section 5.1 for Method Statement.																						
25.1703(a)(1)(2)(3)(4)(d) Function and installation: EWIS 25-123 73P5797014N001 SUPPORT INSTL - FWD SPAR, RH 1 See main document section 5.1 for Method Statement.

25.1705(a)	Systems and functions: EWIS	25-123	72P3427160W	STANDBY DISPLAYS	1	Compliance will be shown by design review that will substantiate that all components that comprise the EWIS under 25.1701 are being designed and manufactured, per engineering provided system wiring diagrams, to ensure proper system functionality with special attention paid to proper wire sizing and wire type selection, based on GVII-GER- 6588 guidelines and that power feeders will allow for deformation of the fuselage. Also, all EWIS components will be reviewed per GER-0662 for appropriate design and limitations and the harness assemblies and installations will also be reviewed to ensure that designs minimize mechanical strain or possibilities for moisture accumulation. This design review take into account GVII-GER-6588 and AC 25.1701-1 Certification of Electrical Wiring Interconnection Systems on Transport Category Airplanes.	A	N/A	EL	2/28/2017	X

25.1705(a)	Systems and functions: EWIS	25-123	73P3427160W	STANDBY DISPLAYS	1	The design review will substantiate that all components that comprise the EWIS under 25.1701 are being designed and manufactured, per engineering provided system wiring diagrams, to ensure proper system functionality. Special attention is paid to proper wire sizing and wire type selection, based on GVII-GER-6588 guidelines and that power feeders will allow for deformation of the fuselage. Also, all EWIS components will be reviewed per GER-0662 for appropriate design and limitations. The harness assemblies and installations will also be reviewed to ensure that designs minimize mechanical strain or possibilities for moisture accumulation. This design review will take guidance from GVII-GER-6588 and AC 25.1701-1 Certification of Electrical Wiring Interconnection Systems on Transport Category Airplanes.	A	N/A	EL	5/12/2015		X
